THE "RED CARPET" IS NOT ENOUGH

In the wild scramble for new industries going on all over the country today, industrial prospects are being "wined and dined" and in some extreme instances have been virtually offered "the county courthouse with a fence around it."

While community attitudes are undeniably important to industry, business executives engaged in the serious task of selecting a plant location will look to other basic factors which will spell success or failure to their particular enterprise.

Of vital importance are details on: sources of raw materials, fuel, water, power, transportation, labor, plant site characteristics, construction costs and distribution to existing markets—to name only part of the usual governing factors. And this is where we come in. We know the South and we speak the language of industry. Our long experience in the industrial development field places us in position to render invaluable assistance to industries seeking new plant locations.

Our services are available to interested executives without obligation or cost. Inquiries held in strict confidence.

A SOUTHERN REPORT

ENGINEERS measure maps of the Coosa River basin on their hands and knees to gather information on the area. Data helps in determining the most favorable locations for future dam sites.

It takes dynamic electric power developments to keep pace with Southern growth!

DEMANDS for electric power in the Southland are higher than ever as the region's tremendous industrial and agricultural progress continues. And the investor-owned electric power companies of The Southern Company system are continuously moving ahead to meet this challenge of the future.

For example, new power producing projects authorized or under construction at this time have a total generating capacity of 925,000 kilowatts. Major projects proposed for the future are the Coosa River hydro development of 421,700 kilowatts, the Warrior River hydro development of 205,000 kilowatts and the 1,000,000 kilowatt steam generating plant on the Coosa River.

Electric power increases of this nature are sound measures of the area's strong new economy. Too, they are steps in league with the long, swift strides of Southern progress.

Shaded section designates area served by the four investor-owned electric power companies in The Southern Company system.

What happens when a NEW PAYROLL comes to town?

MORE SPENDING MONEY isn't the only thing a new factory payroll brings to town. A survey made by the U. S. Chamber of Commerce shows that 100 new factory workers also meant this to a community:

- 296 more people
- 112 more households
- 51 more school children
- 107 more passenger car registrations
- 174 more workers employed
- 4 more retail establishments
- \$590,000 more personal income per year
- \$270,000 more bank deposits
- \$360,000 more retail sales per year

Here's convincing proof, we think, that whatever helps the Southland to develop industrially is a real contribution to the long-range growth and

prosperity of the South. The Southern helps in many ways.

Our own Industrial Development Department aggressively seeks new industries for every available plant site. Our nation-wide advertising program continually invites business enterprises of all kinds to "Look Ahead — Look South!" for greater opportunity. Our modern rail service helps provide the economical and efficient mass transportation so indispensable to industrial progress and growth.

New payrolls—and all they mean to a community—are "coming to town" all over the South. Last year 26,000 new jobs were created by industrial expansion along the Southern Railway System alone. Many in the South helped bring this about. All in the South benefit!

Harry A. DeBolt
President

SOUTHERN RAILWAY SYSTEM

WASHINGTON, D. C.

The Blue Book Mission, 1909-1957

It is with considerable pride that your editors present this 1957 survey reflecting the economic advancement of the Southern states. This marks the 49th annual study conducted by the staff of MANUFACTURERS RECORD.

Through the years the BLUE BOOK edition has gained distinction as the South's economic and industrial reference source. A very substantial effort has been made to improve the content of the new 1957 issue.

Readers who have used the BLUE BOOK for a long period of time will recognize that most of the statistical information follows the pattern set in previous years. This has been done deliberately to facilitate comparison of data from year to year and to enable readers to establish trends.

Once more, the statistical portion of the book has been handled by Associate Editor Caldwell R. Walker. Mr.

Walker is an economist residing in Washington, D. C., who devotes his entire time to collecting factual data for the RECORD and the BLUE BOOK. His experience includes more than a decade on this assignment.

Mr. Walker

The data presented herein has been gathered from many sources and put into convenient form by Mr. Walker. A discussion of sources and terminology may be found in the 1956 edition on page 26.

The reader who takes the time to study the statistics in this issue carefully will find many significant facts. He will be able to identify the South's outstanding growth industries and growth areas. Much of the material is unavailable elsewhere.

As a result of a merger which took place in 1956, the BLUE BOOK edition now also includes the SOUTHERN INDUS-

TRIAL DIRECTORY, first published in 1952. Thus the reader will find, in addition to the usual state data, a directory of major Southern manufacturers indexed geographically and by product.

In the geographical section are listed all manufacturers employing 100 or more workers. A code indicating number of employees in each plant is utilized. (Key to this code appears at the bottom of many pages throughout the publication.)

In order to compile accurate and up-to-date information for this portion of the book, a completely new survey has been made in recent months under the guidance of Chief Researcher Mary Elizabeth Friedman. Miss Friedman, who was educated at Pennsylvania State University, Columbia University and the University of Wisconsin, has also had library and research experience at the University of California. She has worked closely with state development agencies and other organizations in the compilation of this edition.

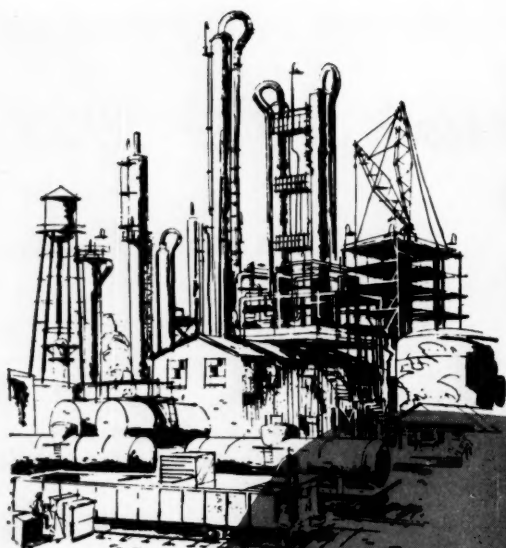

Miss Friedman

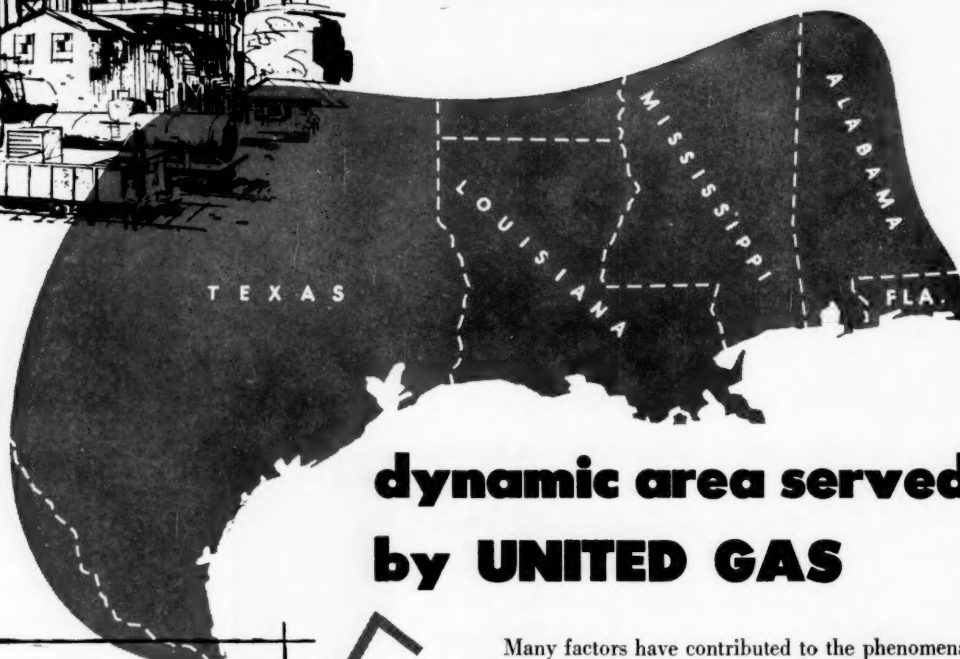

Another feature of this edition is the product index, which lists manufacturers of many classes of industrial supplies, equipment and machinery. This section is designed to supplement surveys conducted regularly by the RECORD to identify sources of supply for Southern industry.

While care has been exercised in compiling this edition, its editors are well aware that there are imperfections. Thus it will be sincerely appreciated if readers will bring errors and omissions to our attention.

—H. M. C.

LOCATE YOUR NEW PLANT IN THE GULF SOUTH . . .

**dynamic area served
by UNITED GAS**

Many factors have contributed to the phenomenal industrial growth of the Gulf South. And industry continues to move south where it can grow . . . expand . . . prosper. Just a few of the reasons are great reserves of natural resources, a plentiful supply of water, proximity to deep-water ports, a year-around working climate, cooperative workers, adequate supplies of dependable, economical natural gas and the area's own expanding markets.

If you are looking for a new plant location where you can build with confidence in the future, look to the growing Gulf South. If fuel is a factor in your operation, write United Gas, P. O. Box 1407, Shreveport, Louisiana.

UNITED GAS

SERVING THE

Gulf South

UNITED GAS CORPORATION • UNITED GAS PIPE LINE COMPANY • UNION PRODUCING COMPANY

Southern industry chalked up new records during the past year. Total manufacturing output rose to more than \$64 billion. Impressive gains were made in almost every field of science and industry. Here's the panorama of progress as seen by the region's top spokesman.

Southern Industry On The March

By FRANK J. SODAY

President, Southern Association of Science and Industry

Today, the South is building her mighty industrial empire at an ever accelerating rate, and is leading the nation in overall manufacturing expansion.

To illustrate the diversity of southern expansion, the following have been selected at random from announcements made during the past year. Chemstrand is enlarging the capacity of its nylon plant at Pensacola, Florida, to 114 million pounds annually; Pratt

& Whitney is building a \$40 million aircraft engine plant at West Palm Beach, Florida; West Virginia Pulp and Paper is spending \$50 million for expansion at Luke, Maryland; Joseph Schlitz is building a \$20 million brewing plant at Tampa, Florida; Texas Eastern Transmission will construct an \$83 million pipeline to bring natural gas from Mexico to Texas; the Seaboard Air Line Railroad is spending \$20 million for new freight cars; and the Air Force is spending \$60 million on guided missile projects in the southeastern states.

Of even greater importance from the standpoint of future progress is the \$5 million appropriated for the University of Georgia Science Center, the 5500 pounds of uranium secured by Auburn for experimental use, and the sulfur mining operations six miles out in the Gulf of Louisiana.

At the Southern Governors' Conference at Point Clear in 1955, the writer predicted that the South would have 30 per cent of the country's manufacturing industry by 1965, and that in order to do so it would be necessary to build three plants each day during this period, or a total of 10,000 plants in 10 years. This rate of growth, considered

to be fantastic at the time, was exceeded in 1956, with 1060 new plants added to the southern manufacturing potential. The South, the birthplace of American industry, is coming into its own at last.

To illustrate the rapidity with which the South has been building its manufacturing potential, the Gulf South area, which includes Texas, Louisiana, Mississippi, Alabama, and Northwest Florida, has accounted for one-sixth of all of the industrial construction in the country during the past ten years. The value of such construction is \$3¼ billion, which is six times the value of all industry built in the New England area during the same period. On an average, over \$1¼ million worth of construction was completed each working day for 10 years.

Continuous Growth

As a result of this phenomenal construction program, the South's proportion of the nation's manufacturing facilities has increased from 9 per cent in 1900 to 22 per cent today. Of the \$26 billion expended by the government and private industry for wartime construction, \$4½ billion was spent in the South to double the area's industrial plant capacity. Following the war, the

Dr. Frank J. Soddy, current President of the Southern Association of Science and Industry, is a rare combination of scientist and business executive. As Vice President and Director of Research for Chemstrand Corporation, he supervises one of the region's largest technical staffs. In addition, he carries the story of Southern progress to conferences throughout the nation.

Before joining Chemstrand at Decatur, Ala., Dr. Soddy held top technical positions with Lion Oil in Arkansas; Devoe and Reynolds, in Kentucky; and Copolymer Corporation in Louisiana. Despite his heavy business responsibilities, he has found time to obtain more than 130 patents, largely in the chemical field.

SOUTHERN SUMMARY

South built one new, multi-million dollar plant each working day for a period of three years.

Today, the South has 33,700 manufacturing establishments, of which 15,000 employ 50 or more workers. Some 22,000 new industrial plants have located in the area since 1939, and its industrial output has increased from \$11 billion to \$62¼ billion during the same period.

To illustrate the nature and extent of this industrial progress, which has covered the entire range of modern technology, certain growth industries will be reviewed. And this will be done in the light of past accomplishments, for industry has a long and honorable history in the South.

The beginnings of the southern textile industry go back nearly 500 years. When Columbus discovered America on October 12, 1492, he traded with the Indians for cotton yarn, which they possessed in abundance. But even at that early date, the industry was an ancient one. Cotton fabrics of good quality were produced in quantity by the Pueblo Indians of the Southwest some 3000 years ago, and in South America the Peruvian Indians of the time of Christ were weaving luxurious cotton and woolen fabrics of a fineness which cannot be duplicated by any known process today.

The first ships in the New World were built at Apalachicola, Florida, by Panfilo de Narvaez in 1527. They were tarred with pitch, which a Greek chemist, known as Don Teodoro, made from pine rosin, the first recorded chemical operation in this country.

In 1543, ships carrying the survivors of the DeSoto expedition anchored near Sabine Pass in Texas to collect the crude oil scum floating on the water to caulk their vessels, foreshadowing the vast petroleum industry which is one of the hallmarks of the new South.

Although many years were to pass before these pioneering uses could be exploited fully, each laid the basis for a large and expanding industry in the South. Today, the South has 51 per cent of the textile industry, 36 per cent of the chemical industry, and 38 per cent of the petroleum manufacturing facilities of the nation.

Textiles

As cotton was the mainstay of southern economy, and its most abundant raw material, it was logical that the first expansion in industry in the early

years of the new century should be in the textile field. Today, the South has over 80 per cent of all cotton textile production in the United States, and about the same proportion of the rayon and acetate textile production. The woolen and worsted industry also is moving South at a steadily accelerating rate.

Like the cotton textile industry, the production of rayon is predominantly a southern industry. Approximately 70 per cent of the nation's rayon production capacity is in the South, 19 plants in 8 southern states, and new plant installations will increase this proportion even further. This is a logical location for the industry as the basic raw material is cellulose in the form of cotton linters or wood pulp, both of which are available in almost unlimited quantities in the South.

The manufacture of synthetic fibers is almost wholly a southern industry, and the predicted increase in production from 400 million pounds in 1955 to 4 billion pounds in 1975 indicates that it will become one of the most important manufacturing operations in this area. The development of this industry clearly indicates the influence of established related industries upon the location of a new enterprise.

As cotton was entirely a southern product, the textile industry inevitably became firmly established in the same area. As the textile industry represents the largest single outlet for chemicals, a chemical industry was established in the South to supply this need. As chemicals provide the basic raw materials for the production of synthetic fibers, and since the established southern textile industry could convert the fibers to yarns and fabrics, the South was the only logical location for the synthetic fiber industry.

While some concern has been felt in certain sections of the country as to the effect of synthetic fibers upon established markets for natural fibers, the South is in the happy position of being on the winning side regardless of the outcome of the competition between cotton, rayon, and synthetic fibers. Producing the bulk of the cotton and rayon, as well as substantially all of the synthetic fibers, the South will continue to supply the greater portion of the fiber and fabric requirements of the country.

Among the important new synthetic fiber plants in the South are Du Pont's nylon plants at Seaford, Delaware, Martinsville, Virginia, and Chattanooga, Tennessee; Du Pont's Dacron

plant at Kinston, North Carolina; Du Pont's Orlon plant at Camden, South Carolina; Chemstrand's Acrilan plant at Decatur, Alabama; Chemstrand's nylon plant at Pensacola, Florida; Allied Chemical's nylon plant at Hopewell, Virginia; American Enka's nylon plant at Enka, North Carolina; and Carbide and Carbon's Dynel plant at South Charleston, West Virginia.

Synthetic fiber plants announced, or under construction, include Eastman's Verel plant at Kingsport, Tennessee; American Cyanamid's Creslan plant at Pensacola, Florida; Du Pont's nylon plant at Richmond, Virginia, and Dow's Zefran plant near Jamestown, Virginia.

The chemical fibers are as much at home in the South as cotton. Together with this fine natural fiber, they are making a determined bid for supremacy in the textile field.

Chemicals

Probably no other section of the country illustrates so well the value of research in improving the economic well-being of a region as the South. The majority of its industry is new and is based upon recent technological advances. Of the 250 per cent increase in the per capita income in the South since 1939, at least 50 per cent, and possibly as much as 75 per cent, may be directly attributed to the application of research to convert southern resources into products required by our economy.

As the chemical industry is one of the most research-minded of all industries, it is particularly noteworthy that more than half of the nation's chemical plants have located south of the Mason-Dixon line in the last few years. Chemical employment is increasing faster in the South than in any other area, and over 20,000 professional chemists and chemical engineers are now employed in the southern chemical industry.

The South now has 36 per cent of the nation's chemical industry, and it is expected that this will increase to one-half within the next ten years. The majority of the chemical industry undoubtedly will be located in the South by 1975.

While certain of the newer industries, such as electronics or atomic energy developments, may be more glamorous at the moment, the manufacture of chemicals continues to be the most important of the South's growth industries.

Petrochemicals are the backbone of the southern chemical industry, and over 80 per cent of all of the petrochemical plants in the country are located in the South, particularly along

the Texas-Louisiana Gulf Coast. Petrochemicals are derived from petroleum and natural gas, the South's most important mineral products. They account for over 25 per cent of all of the chemicals produced in this country today, and it is expected that this will increase to 50 per cent within the next decade.

The petrochemical industry was established only a quarter of a century ago, and has seen its most rapid expansion since the last war. It is based entirely upon fundamental studies relating to the conversion of hydrocarbons to chemical products. Petrochemical production in the South has a value of nearly \$4 billion today.

More than one-third of the petrochemicals produced are used in the manufacture of plastics and plasticizing agents, both of which are products of modern research. This is a continuation of the trend which has been under way for some time to replace steel with plastics and the lighter metals.

A fruitful field for development would be the provision of additional plants in the South for converting the intermediate petrochemicals to plastics, as well as for the manufacture of finished articles from such plastics. In this connection, it is interesting to note that 75 per cent of the new plastic, polyethylene, is now being produced in Texas and Louisiana.

Ammonia is an important petrochemical, particularly from the standpoint of southern agriculture. The synthesis of ammonia ranks with the greatest discoveries of all times. Since the dawn of civilization, man had been living on the accumulated stores of nitrogen in the soil, and this capital was running out in the closing days of the last century. In 1887, Huxley, the great English economist, predicted that western civilization would disappear in 50 years as a result of the exhaustion of all available supplies of fixed nitrogen.

It is sometimes darkest just before the dawn, however, and this grim prediction did not materialize. In 1910, after 10 years of research, Fritz Haber achieved the direct synthesis of anhydrous ammonia from hydrogen and nitrogen. At long last, man had discovered a way to renew his capital of this life-giving element indefinitely.

Over half of the country's synthetic ammonia production capacity of 3 million tons is in the South, and the major portion is made from natural gas. Production is growing rapidly and yet has not been able to keep up with demands.

SOUTHERN SUMMARY

Due to the rapidly declining reserves of nitrogen in southern soils, approximately 60 per cent of all agricultural ammonia is consumed in this area. If research had now shown the way to convert the natural gas so readily available in the region into ammonia, southern agriculture would be in a rapidly declining state of productivity today.

Another important field of expansion of the southern chemical industry has been in the manufacture of synthetic rubber. Approximately 70 per cent of the country's production facilities are located in the South. Present installed capacity is one million tons, and this is expected to increase to 2½ million tons by 1975.

Without the rapid development of the synthetic rubber industry during the last war, using petroleum and natural gas as the basic raw materials, the country would have been unable to prosecute the war to a successful conclusion. Today, the synthetic rubber industry in the South contributes substantially to the area's prosperity.

Atomic Energy

As we enter the atomic age, it is

comforting to note that the South is playing a major role in atomic energy developments. Nuclear installations in the region already involve an investment of more than \$3 billion, and are responsible for a variety of mushrooming enterprises important to all of the states in the region. Over 100 firms in the South today are participating in nuclear development programs.

The atomic industry in the South had its start at Oak Ridge during World War II. The operating facilities include one of the largest continuous process plants in the world, a four-story plant covering an area of 60 acres, producing U-235. The Oak Ridge National Laboratory is a nuclear research center and the source of most of the nation's radioactive isotopes, while the Oak Ridge Institute of Nuclear Studies assists universities in developing strong graduate and research programs in the nuclear industry.

The total investment at Oak Ridge is in excess of \$1¼ billion, employment is about 22,000, and the annual payroll is around \$170 million.

Another AEC facility having a pro-

found effect upon the economy of the South is the Savannah River Plant located near Aiken, South Carolina. This plant, which was built by Du Pont, and is operated by the same company, represents one of the greatest engineering projects ever undertaken. The plant cost \$1¼ billion and produces fissionable materials for use in nuclear weapons, including H-bombs. Recently, arrangements have been completed for the production of radio-active cobalt, used in the treatment of cancer, at the plant.

Other key AEC operations in the South include the separation plant at Paducah, Kentucky, operated by Procter and Gamble; the Pantex weapons plant at Amarillo, Texas, operated by Union Carbide; and the ore-buying station at Plant City, Florida.

Important leaders in industrial applications of atomic energy in the South include the Newport News Shipbuilding and Dry Dock Company, which is studying the use of atomic power in ship propulsion; the Davison Chemical Company, which is active in the rare earth field; the General Dynamics Corporation, which is interested in nuclear reactors and nuclear-powered airplanes; the Southern Company, which is investigating the production of electric power from atomic energy; and some 50 other southern firms in the engineering, construction, and manufacturing fields.

The magnitude of the civilian atomic energy field may be gauged by the prediction that the production of components for reactor plants will be a \$700 million a year business by 1963. By 1965, it is estimated that \$7½ billion will be invested in atomic reactors in this country, and that from 30,000 to 40,000 scientists and engineers will be required for this enterprise.

The Southern Governors' Conference has sponsored and directed a series of conferences on the use of atomic energy in the fields of agriculture, atomic power, industry, and medicine. The Southern Association of Science and Industry was co-sponsor of an Atomic Industrial Forum in Atlanta in April, 1956. This conference attracted more than 400 southern business leaders, the largest group ever assembled to discuss the South's atomic industrial future.

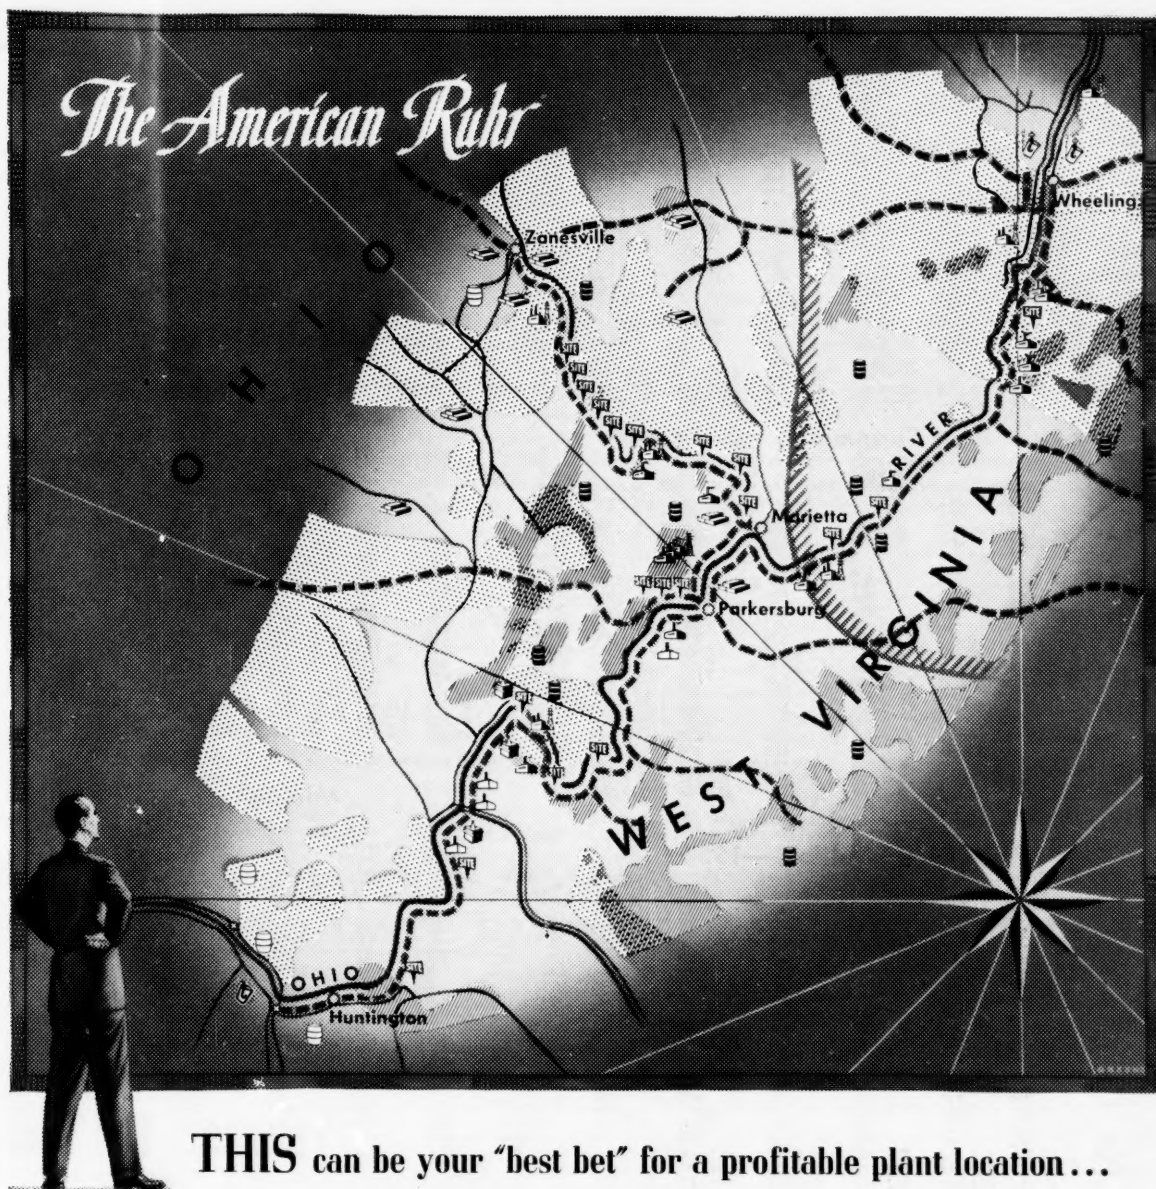

The Southern Regional Education Board, under the Chairmanship of Governor Collins of Florida, held a series of meetings at Oak Ridge, Aiken,

THIS can be your "best bet" for a profitable plant location...

In a decade, industry invested *hundreds of millions* in new plants in this Valley of the Ohio. More are planned. Modern Power Plants, completed and building, can supply 2 million KWs of power.

This new industrial Utopia found a happy combination—nearly inexhaustible *Water* supply; America's finest *Salt* deposits; vast

reserves of bituminous *Coal*; extensive *Natural Gas* fields. Nearby Steel, Ceramics, Cement, Brine and Oil are available—and dependable B&O transportation.

Some *fine sites* are still available in this area, with the *economic atmosphere* vital to profitable production. There's one to meet YOUR NEEDS!

Raleigh, and St. Petersburg. From these meetings came a comprehensive plan for the development of atomic energy for civilian uses on a regional basis in the South. This plan was adopted by the Southern Governors' Conference at their September, 1956, meeting at White Sulphur Springs.

Electronics

The rapidly growing electronics industry has found the South to be a fertile field in which to grow, and over 200 important electronics plants are now located in the region. More than 90,000 Southerners are working in electronics, with an annual payroll of nearly \$500 million. This growth is having a significant effect upon the economy of the area as electronic components are finding widespread use in practically every phase of manufacturing, communication, and transportation.

On a national scale, sales and revenues this year will amount to \$11 billion. It is expected that this will increase to \$16 billion by 1960, and to \$22 billion by 1965. These estimates indicate that electronics is the world's fastest growing major industry.

Highlighting the part played by the South in the electronics field, Texas In-

struments of Dallas now supplies more than one-third of the nation's transistors, with annual sales of some \$28 million.

A host of home-grown industries in the area are manufacturing such products as radio and television sets, geophysical prospecting equipment, magnetic recording tape, radar navigation equipment, and a great variety of electronic components.

The larger companies, of course, account for the largest investments and the greatest employment in the region. General Electric, for example, has constructed 19 major plants, employing 30,000 workers, in the South during the past decade. And Western Electric has five plants in North Carolina alone.

In addition, there is an impressive volume of electronics research throughout the South. One of the leading groups is the Georgia Tech Research Institute in Atlanta, which has an electronic computation laboratory as well as a complete electronic facsimile system. The Industrial Research Institute of Chattanooga has pioneered the development of an automatic electronic control for machine tools, in which information from a tape controls the shaping of a piece of material in three

dimensions. And Bell Telephone Laboratories has chosen a location near Americus, Georgia, to test its new solar battery.

As an indication of the widespread nature of the rapidly growing electronics industry in the South, more than 100 manufacturers of electronic equipment exhibited several million dollars worth of equipment at a meeting of the Institute of Radio Engineers in Atlanta recently.

Aircraft and Missiles

Another rapidly growing field in the South is the development and manufacture of all types of aircraft and guided missiles. A recent survey indicated that the area has some 110 aircraft and missile plants, compared with some half dozen at the end of World War II.

The most significant aspect of the South's aeronautical expansion has been its wide distribution, as well as its relative security against enemy attack. Bombers or missiles directed across the North Pole to targets in the United States could be identified and intercepted before reaching the southern area.

The South is now the center of some of the nation's most advanced aeronautical programs. The world's first

DOES YOUR COMPANY PROVIDE UP-TO-DATE EMPLOYEE BENEFITS?

Styles change in employee benefits plans as they change in automobiles or plant machinery. Result? Just as newer cars and machines perform more effectively, so can a modern employee benefit plan provide better protection.

Are you now paying for an out-dated Group Insurance Plan with death benefits out of line with earnings, or disability benefits unrealistic in view of today's rising costs of medical care?

Massachusetts Mutual Life Insurance Company, long recognized by business leaders in the South as a forward-looking underwriter of Group Insurance plans — Life, Disability, Pensions, — makes available to you the services of its experienced staff of consultants who will be glad to work with your agent or broker in designing the plan of benefits you want for your employees.

For quick, expert service, telephone or write the Group Sales Office in your area:

SOUTHERN SUMMARY

artificial satellite will be launched from a southern base, while various development groups are busy with such projects as intercontinental guided missiles and the first aircraft powered by atomic energy. Of even more importance is the fact that the South in recent years has obtained several of the nation's key aeronautical research installations.

With this as a base, plus a variety of favorable plant location factors, the South is well on the way to become the nation's top region for aircraft development. Texas ranks as the number one aircraft-producing state in the area, with heavy concentrations at Fort Worth and Dallas. Employment in the aircraft industry in these two cities totals 42,000, with an annual payroll of \$200 million. This is second only to the Los Angeles area in aircraft manufacture in the country.

The Convair plant is developing the B-58 supersonic bomber, and is working on the design of the world's first nuclear powered aircraft. Bell Aircraft is active in the helicopter field, and has produced some 1200 units during the past five years. Chance Vought manufactures the Navy's F8U-1 Crusader jet fighter, as well as the Regulus missile

designed for launching from a carrier. Temco Aircraft has recently designed a new primary jet trainer, and an aerial drone system which enables pilotless planes to perform dangerous reconnaissance missions.

Florida has made fast progress in the aircraft and missile field in recent years, particularly in the production of component parts by smaller companies. Among the larger companies, Fairchild Aircraft has located a major plant at St. Augustine. United Aircraft has constructed an engineering facility at St. Petersburg, and Howard Hughes is planning to build a plant to manufacture jet passenger airliners in the southern part of the state.

Lockheed Aircraft has located two major facilities in Georgia. Its Marietta plant is one of the largest industrial plants in the South, with some 19,000 workers and a payroll of \$90 million. Producing B-47 jet bombers and C-130 prop-jet transports, with 100 acres of floor space and an additional 100 acres of paved outdoor working area, it is one of the finest plants in the world.

Recently, Lockheed purchased a site near Dawsonville, Georgia, for the construction of a \$50 to \$100 million facility for the development of nuclear-

powered aircraft.

Douglas Aircraft operates both in Oklahoma and in North Carolina. In Tulsa, Douglas manufactures B-47 bombers and the C-132 cargo transport plane. More recently, Douglas has located a missile unit at Charlotte.

Maryland has several of the nation's oldest and best known aircraft manufacturing facilities. Glenn L. Martin is located at Baltimore. Fairchild at Hagerstown, and Flight Refueling at Baltimore. Martin manufactures the multi-jet seaplane, the XP6M-1 Martin Sea Master, while Fairchild operates plants at St. Augustine, Florida, and Shawnee, Oklahoma, for the production of the C-123 Flying Boxcar, the J-44 jet engine, and the Lark guided missile. Fairchild also was active in the early phases of development of nuclear-powered aircraft with a special unit at Oak Ridge.

Martin has been a leader in the rocket and guided missile field. It manufactures the Martin Matador, the Navy Viking rocket, one of the nation's leading research missiles, and the Navy Martin Vanguard missile, which will place the world's first man-made satellite in its orbit around the world. The vehicle will be launched from the Air

One of G M & O's eight planned industrial areas affording attractive plant sites in Alabama, Mississippi, Tennessee, Missouri and Illinois.

* Too small to tabulate.

Force Missile Test Center at Cocoa, Florida.

In Birmingham, Hayes Aircraft operates a major modification center, employing some 6000 workers.

Southern manufacturers also are producing a variety of accessories and equipment, such as Bendix Aviation in Charlotte, which manufactures airborne electronics equipment. And many companies are expanding the production of private and executive aircraft, such as the Aero Commander manufactured by the Aero Design and Engineering Company of Bethany, Oklahoma, which has been chosen for transporting President Eisenhower on short trips, particularly between Washington and his farm at Gettysburg.

One of the most significant developments in the South has been the location of a number of key aeronautical research centers in the region, which include several bases for the nation's most advanced work in the guided missile field. The Patrick Air Force Base, near Melbourne, Florida, is the main base for the 5000 mile long guided missile range which extends through the Bahama Islands past Puerto Rico and across the South Atlantic to Ascension Island. The first horizontal launching of a V-2 missile was made at this base, and it will be the scene of the launching of the earth's first satellite this year as a part of the International Geophysical Year Celebration.

The missile range has attracted a number of related industries and research activities to northeast Florida. Northrup Aviation employs several hundred workers in the area on a confidential missile program, and several airborne electronics plants have sprung up in the region.

A major research and development center is located at Redstone Arsenal near Huntsville, Alabama. It was originally staffed by a nucleus of German rocket scientists brought in after World War II under the leadership of Wernher von Braun, who is probably the foremost missile authority in the world today. Total investment at Redstone is \$150 million, and the personnel includes some 7000 civilians with an annual payroll of \$40 million.

Redstone Arsenal, under the leadership of Major General M. D. Medaris, is the nerve center for the Army Ordnance's missile research and development activities, and is playing an increasingly important role in keeping our national defenses superior and up

to date. Its facilities are being substantially enlarged, as well as those of related industries and technical activities at the base, such as those operated by the Thiokol Corporation and Rohm and Haas.

In addition to work in the missile field, Redstone scientists are working on the problems of interplanetary flight. The launching of the first earth satellite from Florida may be followed in the not too distant future by an interplanetary vessel to explore the limitless

expanse of space. Man, who first flew at Kitty Hawk, North Carolina, in 1903, continues to spread his wings and expand his horizon in the South until, like Einstein, he has come face to face with the infinite reaches of the universe.

Another key facility is the Air Force Engineering Development Center at Tullahoma, Tennessee.

The first major aeronautical research facility in the country was the laboratory of the National Advisory Committee for Aeronautics at Langley Field,

Virginia. It was here that John Stack and his associates made the discoveries which enabled American aircraft to crack the sound barrier.

At the Allegheny Ballistics Laboratory near Cumberland, Maryland, which is operated by Hercules for the Navy, booster rockets for the Nike and Terrier guided aircraft missiles have been developed, as well as for the Honest John free-flight ground-to-ground artillery rocket. This base also is involved in project Vanguard, the earth satellite program.

An important missile development center is operated by Sperry Farragut Company at Bristol, Tennessee. The Navy has an 8,600 acre rocket station at Camden, Arkansas, while at McGregor, Texas, Phillips Petroleum is said to be developing the most powerful solid rocket fuel ever made.

The top facility for the study of the effect of climatic conditions on aircraft is located at Eglin Air Force Base near Pensacola, Florida, while the Kelley Air Force Base in Texas and the Navy's air base at Pensacola are the centers of pioneering aero-medical investigations. Scientists at these locations are hard at work studying the problems of transporting human beings through interplanetary space.

Supplementing the work of Federal research groups and private industry are a number of alert and aggressive educational and research institutions throughout the South. The Applied Physics Laboratory at Johns Hopkins University developed the pioneering Aerobee rocket, as well as working closely with the military services in testing the German V-2 missile and studying conditions in the upper atmosphere. In addition, it has developed the new Talos surface-to-air guided missile for the Navy.

Atlantic Research Corporation in Alexandria, Virginia, has been particularly active in studying solid propellant rockets; the Georgia Institute of Technology has long operated an aeronautical department with wind tunnel research facilities, and at North Carolina State College studies are being made of rocket control problems.

The impact of these developments upon small business enterprises in the South has been tremendous. Lockheed's Marietta plant, within three years of its establishment, was doing \$45 million worth of business with Georgia firms, and a total for the southeastern states of \$77 million. It made purchases from

7500 different firms in a recent three-year period.

Complete data are not yet available to indicate the full monetary value of the South's aircraft and missile industry. The nation's missile program totals about \$1 billion per year, and it is expected that this will double within the next three to five years.

With a favorable climate, ample space for plant dispersion, a skilled labor force, and a record of aggressive development, the South is certain to enjoy an important share of the expected large expansion of the aircraft

and missile industry. Aviation, which was born in the South, promises to find its most fertile soil for development and expansion in the area.

Other Industries

The food manufacturing industry is the most important (\$11 billion, 25 per cent of the nation) industry in the South today, followed by oil and coal products (\$7½ billion, 38 per cent of the nation), chemicals (\$7¼ billion, 36 per cent of the nation), and textiles (\$7¼ billion, 51 per cent of the nation.)

Food processing industries in the

area have progressed so rapidly in recent years as to become a major factor in the agricultural and industrial economy of the region. With the average American using 1600 pounds of food a year, production must be steadily increased to take care of the expanding economy of the country. The southern food processing industry consists of 12,200 plants and 450,000 employees, with a payroll of \$2 billion.

Reflecting the relatively large size of individual installations, and the extent to which automatic processing and control procedures are employed, the oil and coal industry comprises 300 plants employing 90,000 persons, with a payroll of \$1½ billion.

The pine tree is the source of the basic raw materials for one of the oldest as well as one of the most recent southern industries. Rosin and turpentine obtained from pine are the starting materials for the naval stores industry, while cellulose derived from pine is used in making rayon pulp, Kraft paper, and newsprint.

The South's pioneering scientist, Dr. Charles Herty, made revolutionary contributions to both industries. The Herty cup which he developed for collecting gum rosin stopped the wasteful practice of cutting boxes in the tree to receive this product. As the latter practice usually killed the tree in a short period of time, the almost universal adoption of the Herty cup placed the naval stores industry on a sustained yield basis. His pioneering research to determine the type of pine suitable for the production of newsprint led to the discovery that the use of young trees would produce newsprint of excellent quality. He completed his epoch-making discovery by developing satisfactory methods for bleaching the pulp. The southern news-

print industry rests firmly and securely on his work, and the great stands of pine dotting the southern landscape are his enduring monument.

The production of forestry products, particularly those based on the utilization of pine, are increasing at a rapid rate. There are 80 pulp and paper mills in the South today, and this number is growing rapidly. Many economists are of the opinion that the discovery of the sulfate process for making Kraft and newsprint from slash pine triggered the industrialization of the region. These 80 mills supply 40 per cent of all of the paper sold in this country, and the South is well on its way to become the paper-making industrial center of the world.

Forest Products

Southern newsprint production has now reached 500,000 tons per year, and it is expected that this will increase to 1½ million tons by 1975. The South now produces more than half of the wood pulp manufactured in the country and is the largest producer of chemical wood pulp in the world. Approximately 9 million tons of wood pulp, valued at nearly \$2 billion, are produced each year. The total value of southern forestry products exceeds the total value of the cotton and cottonseed crop.

Even in this field, much work yet remains to be done in utilizing the whole tree. Only 65 per cent of the average tree is converted into useful products by the lumbering industry, and the production of one ton of wood pulp results in the simultaneous production of a ton of lignin which is almost entirely wasted in present commercial operations.

The utilization of only two-thirds of

the mill residues in the country would give sufficient molasses to provide three pounds per day for every head of cattle in the United States, and the lignin now wasted could be converted readily into chemicals for the production of nylon and other important consumer items. In addition, one ton of wood residues can be processed to yield 110 gallons of liquid fuel.

As the petroleum and coal resources of the South are depleted, the pine tree will become an important source of raw materials for industries based on their use. The forests of the South comprise the most important renewable resource of the area, and continuing research undoubtedly will make them an increasingly important contributor to the economy of the region.

Among the rapidly growing industries in the area are the light metals industries, of which the production of aluminum is the most important. The expansion program began during the Korean war was completed in 1955, more than doubling the nation's annual primary aluminum production since 1950. Production is now at the rate of 3-1/3 billion pounds and shipments to industry were 35 per cent higher in 1955 than during the previous year.

Announced expansion plans of present and prospective producers will add a total of 1½ billion pounds of new capacity within a few years, a 46 per cent increase over 1955 capacity.

The aluminum industry is largely concentrated in the South. There are nine primary producing plants in Alabama, North Carolina, Tennessee, Arkansas, Louisiana, and Texas. And these six states have practically all of the country's alumina-producing plants. The main reasons for this concentration

SOUTHERN SUMMARY

of the industry in the South are the accessibility of the three essential elements required in the production of aluminum, namely, low cost fuel and power, skilled labor, and bauxite, the basic raw material from which aluminum is made.

In addition to possessing domestic supplies of bauxite, the aluminum industry depends for a major portion of its requirements on imported ore from the islands of Jamaica and Haiti and the northern coast of South America, particularly British and Dutch Guiana. Ore movements from these countries travel a relatively short water distance to the Gulf ports of Mobile, New Orleans, and Corpus Christi. Thus, in terms of its raw material requirements from domestic and foreign sources, the aluminum industry has its roots deep in the South.

The rapidly expanding use of aluminum in many important industries has

been responsible for its phenomenal growth. Thus, in the automotive industry where the average use of aluminum 10 years ago was less than 10 pounds per car, one of the latest models uses 197 pounds per car, including gold-anodized aluminum grilles. And certain authorities are predicting that by 1960, the average use of aluminum per car will be 1000 pounds, which would amount to approximately 8 billion pounds per year. If this should come to pass, it would have an enormous effect upon the economy of the South.

And the well established industries also are doing very well. In the past 10 years, steelmaking capacity in the South has been increased by 70 per cent, which is twice the national average. Dixie's industry is in an expansion mood all along the line.

Factors Responsible for Industrial Expansion

The most important factors respon-

sible for the rapid industrialization of the South are the Three M's—Men, Markets, and Materials.

1. Men

The most important single factor in the agricultural and industrial development of the South has been the character and ability of the people in the area. The huge reservoir of willing workers, who can be easily trained to handle a variety of complex manufacturing operations, is a prime attraction for industry.

Equally important is the fact that Southerners have demonstrated their ability to design, built, and operate a wide variety of industrial plants in an extremely satisfactory manner. Many surveys have shown that southern plants in many industries operate at better efficiencies, and at higher quality and profit levels, than comparable installations in other sections of the country.

2. Markets

The sharp increase in per capita income in the South in recent years—250 per cent since 1939, 64 per cent above the national average—has stimulated the construction of plants for the production of consumer items to supply the expanding needs of the people of the area. This economic growth has promoted further economic growth, and the region is now involved in a cycle of industrial expansion that feeds on itself with growing vigor.

The South's share of the expected population growth during the present quarter of a century is 15 million people, or an average of one million persons for each state. As each person uses approximately 13 tons of material each year, the magnitude of the markets available for industry in the South in the coming years is very large.

There is every reason to believe that the construction of plants for consumer items will continue at an accelerated pace. Many economists believe that within the next decade the southern states will come up to the national average in per capita income. This would mean an increase in per capita annual income of \$400.

Markets will continue to spearhead the South's economic progress.

3. Materials

Materials comprise the third item in the triumvirate of important factors dictating the location of industry.

As the South provides 35 per cent of the agricultural products of the nation, it is significant that one-half of all new

plants located in the South last year were related in some way to agricultural activities. The South's most important manufacturing operation is food processing, and 25 per cent of the plants operating in this field are in this area. The South has 51 per cent of the country's textile mills and 88 per cent of its tobacco manufacturing operations.

The South has 33 per cent of the forests of the country, 32 per cent of the lumber industry, and 25 per cent of the pulp and paper industry.

The South accounts for 56 per cent of all of the minerals produced in the United States, and approximately three-fourths of all petroleum and natural gas production. It produces 25 per cent of the nation's coal.

The importance of petroleum, natural gas, and coal as raw materials for the chemical industry is indicated by the fact that over 5000 chemical products are obtained from them. These include such diverse items as wool-like fibers, nylon stockings, tires, fertilizers, plastics, dyes, and perfumes.

The production of chemicals from sea water will continue to be a fertile field for development. The ocean is the last great undeveloped source of a large number of important minerals, and in the exploitation of this virtually inexhaustible source the South has important locational advantages due to its long coastline. The Dow Chemical Company is presently operating a large plant for the production of bromine and magnesium from sea water at Freeport, Texas.

Many agricultural products are important raw materials for industrial operations, and expanding demands for this purpose have changed the pattern of production of many southern crops. As an example, the development of edible fats from cottonseed oil has changed the status of cotton seed from an unwanted by-product to that of an important agricultural commodity. In certain sections of the South today, cotton is raised primarily for the production of seed instead of fiber. Fisheries also provide raw materials for many industries.

4. Water

The nation's greatest undeveloped water resources are in the South. The average rainfall is 40 inches, compared with 30 inches for the country as a whole. In addition, the South is using only 4 per cent of its water resources,

while the average for the nation is 18 per cent.

5. Government

Substantially all of the state and local government units in the South are friendly to industry, and almost all of the states have development agents to assist in the location of industry in the area. These agencies are particularly active in such fields as economic research, plant financing, minerals development, planning and zoning, forestry, and water usage and conservation.

6. Transportation

The South has over one-half of the country's salt water coastline and 60 per cent of the nation's navigable inland waterways. In addition, it has 36 per cent of the combined road, railroad, and airway mileage of the country.

Ten southern ports rank among the top 25 in the nation in annual tonnage. Houston is the third port in the nation, while New Orleans ranks fourth.

7. Utilities

The South is a land of low energy costs due to hydroelectric power and an abundant supply of coal, oil, and gas. During the period from 1946 to 1954, the private electric utilities in the South led the nation in the expansion of facilities, the expansion in Texas alone being greater than in all of the New England states. Today, electrical power resources in the South represent more than 30 per cent of the nation's total.

It is significant that the greatest expansion of the large power-consuming industries, such as the manufacture of the nonferrous metals, has been in the South. The production of aluminum, magnesium, and titanium in the area undoubtedly will increase at an accelerated rate.

8. Security

The dispersion of industrial facilities for security reasons has encouraged the location of factories in the South. Increased emphasis upon this factor of national security will lead to an acceleration of this trend.

9. Finances

The South is making rapid strides in strengthening its financial structure. Southern banks now have 20 per cent of the banking assets of the country, and southern life and insurance companies have 26 per cent of the total value of all outstanding policies in the country. A recent survey listed 18

southern banks among the nation's top one hundred institutions.

This marked growth in the financial resources of the region is both a cause, and a result, of the expanding economy of the region.

10. Intangibles

The South is an outstanding region in which to live and do business. The climate, recreational facilities, living conditions, and the desire of the people to improve their economic well-being have been powerful influences in the location of industry in the area.

The solid support given by the press to industrial development, the activities of the more than 500 local, state, and regional organizations devoted to the economic advancement of the area, and the advancement of industrial science in the area have been major factors in the rapid economic gains scored by the South during the past decade.

Ten Good Reasons . . .

. . . why you should advertise regularly in MANUFACTURERS RECORD

1. First in the South, established in 1882. One of nation's first business publications.
2. Provides more extensive editorial coverage of Southern industrial progress than any other medium.
3. Audience includes 25 per cent more Southern manufacturers than nearest competitive medium.
4. Reaches new plant operators FIRST by virtue of extensive New Plant Reporting Service.
5. Authoritative—official publication of Southern Assn. of Science and industry, region's foremost development body.
6. Emphasis on growth industries. Special editorial coverage every month.
7. Research. Annual Blue Book edition is South's standard reference source.
8. Prestige. Quoted in daily papers, by governors, by key industrialists.
9. Reference value. On file in major libraries for decades. Copies filed in most business offices.
10. Expert staff headed by McKinley Conway. Editors have nine college degrees, years of experience in South.

The progress of applied science in the South is a familiar story. This section has led the nation in recent years in the phenomenal expansion of its industrialization. Southerners point with pride to the fact that one-half of the nation's new defense plants since World War II have been located in this section. One-third of all chemicals manufactured in the country is produced here; 90% of the chemical intermediates for plastics, 90% of the nation's synthetic rubber, and 80% of the rayon, and all of the synthetic fiber industry are concentrated in the South, while the petroleum industry has amassed 85% of its petrochemical plants along the Texas-Louisiana Gulf Coast.

How does the South rate in basic scientific research? The above signs of industrial prosperity give little clue, for we must look elsewhere to find what contributions are being made in the development of new scientific knowledge.

A check on the 465,000 articles abstracted in *Chemical Abstracts* for the 78 month period, July 1950-December 1956, will give as comprehensive a view of the present-day scientific thought as one can find anywhere, for this key to the world's chemical literature actually covers large areas of biology, physics, engineering, agriculture, medicine, and other branches of pure and applied science.

Fifteen southern states accounted for 17,726 of these abstracts during the last six and a half years. The steady growth of basic scientific research in each state is recorded in Table I. Maryland had only 281 papers during the last half of 1950, but it boasted 984 during 1956. Similar progress was achieved in the other 14 states, even though the gulf between the more productive areas and the less productive is also a striking feature of Table I. The extent of this difference is apparent from the fact that three states, Maryland, Texas and Tennessee, account for three-fourths of the total, while the combined output of five others is less than one-tenth of the total. These differences in scientific productivity constitute one of the least appreciated, and

Table IV

South Carolina	—	—	—	—	1	—	1	2

yet most serious weakness in southern economy.

Basic scientific research is sometimes spoken of as academic research, and 60% of the South's contributions to *Chemical Abstracts* for the period under investigation came from colleges and universities. The distribution by states of this academic research (Table II) follows the same pattern already noted, with the three states, Texas, Maryland and North Carolina, turning out one-half of the total, while it requires five of the least productive states to total one-tenth.

Industrial laboratories contribute 15% of the research published from the south (Table III). Texas produced more than one-third of this total, while the five least active total only one percent of the contributions from southern industry.

The bulk of the remaining basic research originated in laboratories operated by the Federal Government (Table IV). It should be borne in mind, however, that much of the research reported from universities and from industry was sponsored by grants from the government. Maryland accounts for more than one-half of the research emanating from laboratories of the Federal government, with Oak Ridge, Tennessee, and the Southern Regional laboratory of Louisiana constituting the other most active centers. At the other extreme we find one state with two publications from government laboratories, and another with less than a dozen during the 78 months.

Table V lists the individual colleges and universities with the number of publications from each. The first three institutions account for one-third of the total (Johns Hopkins, University of Texas, and Duke), while at the other

extreme, 38 colleges have only one publication during the six and one-half years, and there are scores of southern institutions failing to register a single entry in Table V.

This study does not show the progress in research in southern institutions of learning during the 78 months, but these data and other details may be found in earlier publications on research in the South (*J. So. Res.* 3, No. 3, p. 9, 1951; *ibid.* 4, No. 2, p. 20, 1952; *ibid.* 5, No. 2, p. 10, 1953; *ibid.* 6, No. 2, p. 37, 1954; *ibid.* 7, No. 2, p. 25, 1955; *Manuf. Record* 125, No. 5, p. 27, 1956).

ALABAMA

Alabama, nicknamed the Cotton State, was admitted to the Union in 1819. The state motto is We Dare Defend Our Rights. The state flower is Goldenrod. The state name is of Indian origin, meaning Clear The Thicket.

In area Alabama consists of 51,609 square miles of which 51,078 are land and 531 water. Of the 3 million people now inhabiting the state, nearly all are native born. Population in 1955 totaled 3,033,000; in 1950, 3,062,000; in 1940, 2,833,000; in 1930, 2,646,000; in 1920, 2,348,000; in 1910, 2,138,000.

Among Southern states Alabama ranks first in production of primary metals, and high in raw mineral output of various kinds. Chief raw materials are cotton and peanuts, coal and iron ore.

Topographically the State presents unique diversification. In the extreme south is the coastline along the Gulf of Mexico with flat sandy land. Somewhat farther north begins a stretch of land known as the Black Belt which is extremely fertile. Still farther north is the coal and iron bearing section. The northern part of the state makes up part of the Tennessee Valley region and displays great scenic beauty.

Two of the largest plants in the metals and food industries in the nation are reported to be in Alabama, according to a recent survey made by MANUFACTURERS RECORD (April 1957). American Cast Iron Pipe Co., in Birmingham, is said to be the nation's largest manufacturer of cast iron pressure pipe, and the Sessions Co., in Enterprise, the nation's largest producer of peanut oil and butter.

Alabama Vice President of the Southern Association of Science and Industry is A. W. Vogtle, Vice President of Debardeleben Coal Corporation in Birmingham. Other SASI trustees from Alabama include: Dr. Milton H. Fies, Consulting Engineer, Birmingham; S. D. Moxley, Vice Pres., American Cast Iron Pipe Co., Birmingham; A. W. Wiebel, Pres., Tennessee Coal and Iron Co., Fairfield; James F. Crist, Vice Pres., The Southern Co., Birmingham; Dr. Stewart J. Lloyd, University of Alabama; Thomas W. Martin, Board Chairman, Alabama Power Co., Birmingham; Dr. Frank J. Soday, Research Director, Chemstrand Corp., Decatur; Col. Harry M. Ayers, Publisher, The Anniston Star, Anniston; Dr. George D. Palmer, University of Alabama.

LEADING INDUSTRIES

The following list of Alabama manufacturers employing more than 100 workers has been compiled from many sources. Those who were particularly helpful, either in providing data or in checking listings, were the Alabama State Chamber of Commerce, Montgomery; the Committee of 100 of the Birmingham Chamber of Commerce; and the Alabama Planning and Industrial Development Board, Montgomery.

IN ALABAMA

250 RIVER SITES AWAIT INDUSTRY

**Industrial Water and River Barge
Traffic Available for New Alabama
Industries**

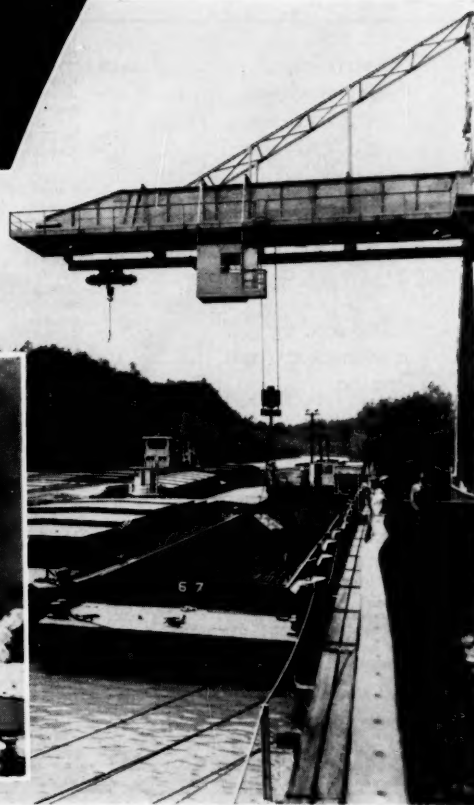

Port of Mobile (36-foot channel) one of the great ports of the U. S. A.

Reynolds Metal Company facility on banks of Tennessee River in Alabama is but one of thousands of North Alabama plants having water transportation connecting with Ohio and Mississippi rivers.

Scott Paper Company plant at Mobile. Alabama ranks 4th in pulp wood and timber production, with a wealth of other mineral resources such as iron ore, coal, limestone, marble, etc.

Loading river barges at Birmingham for water transportation to the great Port of Mobile and export to world markets.

There's no industrial water shortage in Alabama. All these sites are flood-free. They are served by water and railway transportation, excellent highways, and all necessary utilities. Community financing is available.

This Board's site experts and technicians will give you detailed market analysis and all requisite information.

JAMES E. FOLSOM, GOVERNOR

FILL IN AND MAIL THIS COUPON

Pleas Looney, Director
Alabama State Planning and Industrial Board
711 High Street, Montgomery, Alabama, Dept. BB.
Please send me information on Alabama industrial sites.

ARKANSAS

Arkansas, nicknamed the Wonder State, was admitted to the Union in 1836. The state motto is The People Rule. The state flower is Apple Blossom.

Named after an Indian tribe of the same name, Arkansas has an area of 53,102 square miles of which 52,725 are land and 377 are water. Most of the 1,789,000 inhabitants are native stock as were their parents and grandparents. In 1950 population was 1,910,000; in 1940 it was 1,941,000; in 1930, 1,854,000; in 1920, 1,752,000 and in 1910, 1,574,000.

Arkansas ranks high in output of mineral and forest products and is fast expanding heavy industry to process abundant raw materials into finished goods. Chief raw materials are cotton and rice, timber, coal bauxite and petroleum.

Topographically the State falls into four general sections: the Ozark Mountains stretching across the northern part; next southward the broad, fertile Arkansas River Valley; then the Ouachita Mountains in the south. Along the eastern border of the state lies the Mississippi River Valley, rich in cotton, corn, rice and sweet potatoes.

Two of the largest plants in transportation industry in the nation are reported to be in Arkansas, according to a recent survey made by MANUFACTURERS RECORD (April 1957).

Arkansas Vice President of the Southern Association of Science and Industry is W. H. Kennedy, Director of Industrial Development, Arkansas Power and Light, Little Rock. Other SASI trustees from Arkansas include: Dr. R. C. Tallman, Research Director, Lion Oil Co., El Dorado; and Winthrop Rockefeller, Chairman Arkansas Industrial Development Commission, Little Rock.

LEADING INDUSTRIES

The following list of Arkansas manufacturers employing more than 100 workers has been compiled from many sources. Those who were particularly helpful, either in providing data or in checking listings, were the Industrial Research Center, College of Business Administration, University of Arkansas, in Little Rock; Arkansas Industrial Development Commission, Little Rock; and the Little Rock Chamber of Commerce.

MINUTEMEN!

We'd like you to meet them because they have more facts about Arkansas in a minute than you could dig up in a month! These are the men who travel the state working with communities and helping make them better and more attractive towns—stirring up interest in better streets and schools, prettier homes and happier people. The net result is hundreds of communities in Arkansas ready, willing and able to meet the needs of industry in search of a new place to live.

For information on any community in Arkansas,
please write: James A. Dildy, Director Industrial &
Area Development, care of our Company.

FLORIDA

Florida, the Sunshine State, also the Peninsula State, extends deeply southward in the Atlantic Ocean to form the most southerly state of the South and of the United States as well.

The state motto is In God We Trust and the state flower is the Orange Blossom. The name is of Spanish origin meaning Feast of Flowers. Florida was admitted to the Union in 1845.

In area the state is made up of 54,262 square miles of land and 4,298 square miles of water to constitute a total of 58,560 square miles.

In population, Florida is now third in the South and twentieth in the nation. Present population is 3,452,000, a good gain over the 2,771,000 in 1950; 1,897,000 in 1940; 1,468,000 in 1930; 968,000 in 1920; and 753,000 in 1910.

Chief raw materials are sugar cane, citrus fruits and tobacco, and phosphate rock. With substantial forest resources, Florida is a large producer of pulpwood, lumber and resinous chemicals. Also, the state produces in quantity most of the other agricultural products produced by Southern states, such as livestock products, vegetables both for fresh market and for canning, and to a large extent field crops. Finally, fresh water resources are among the best in the nation.

Seven of the largest plants of their kind in the nation were reported to be in Florida, according to a recent survey made by MANUFACTURERS RECORD (April 1957). The food industry claimed two of these "firsts," with the operations of the Pasco Packing Co., in Dade City (reported to be the nation's largest citrus concentrate plant), and the U. S. Sugar Corp., in Clewiston (said to be the nation's largest crude sugar mill). Other industries represented include phosphate mining, textiles (nylon), cigar manufacturing, lumber, and fuller's earth.

Topographically, the state is level and flat with a series of sand bars and islands along the east coast and with many bays and indentations along the west coast. On both coasts have been built some of the most noted resorts of the world. Off the southern tip of the Peninsula is a curving chain of islands called the Florida Keys, the most noted of which is Key West. Connecting the keys and

Florida's current governor is LeRoy Collins, Democrat. The state capital is Tallahassee.

mainland is the largest over-sea bridge in the world.

In the interior, Florida has many thousand of lakes and the largest remaining subtropical wilderness in the United States, the Everglades. Capital of the state is Tallahassee.

Florida Vice-President of the Southern Association of Science and Industry is Philip Moore, President, First Research Corp., Miami. Other SASI trustees from Florida include: Dr. A. P. Black, Head, Department of Chemistry, University of Florida; J. E. Davis, Board Chairman, Winn and Lovett Grocery Co., Jacksonville; Robert C. Miller, President, Florida Times-Union, Jacksonville; and G. G. Ware, Board Chairman, First National Bank, Leesburg.

LEADING INDUSTRIES

The following list of Florida manufacturers employing more than 100 workers has been compiled from many sources. Those who were particularly helpful, either in providing data or in checking listings were the Florida State Chamber of Commerce, Jacksonville; Florida Development Commission, Tallahassee; and the Jacksonville Chamber of Commerce.

Florida has...

PROVED PULLING POWER FOR MANPOWER!

.....

America's industries, moving to Florida in an increasing tide, find that recruitment problems fade in Florida sunshine. Skilled workers in every category—the "cream" of America's labor crop—have their eyes on Florida! They're moving to Florida, too... filling jobs as fast as they open up under the state's continuing record growth. The reasons are obvious: year-round accent on outdoor family living... golden sunshine, absence of temperature extremes... boundless opportunities for happier, healthier, more productive living and working!

AMPLE POWER FOR FLORIDA'S FORWARD SURGE!

Florida Power & Light Company is keeping ahead of Florida's record industrial growth! Generating capability has been expanded 52% in the past 3 years, and will be expanded an additional 64% in the next 3 years!

Write us your needs and we'll gladly help. Address: Industrial Development Service—Florida Power & Light Company, P.O. Box 3100, Miami 30, Florida

FLORIDA POWER & LIGHT COMPANY

Miami, Florida

*The Hon. LeRoy Collins,
Governor of Florida, says:*

"You'll like Florida's golden business climate"

Florida's government is friendly to business. Investment capital is welcome and it flourishes. No state income, duplicating inheritance or ad valorem taxes! Check these advantages and many more!

Gold Rush

in Northwest Florida . . . 1957 Style

If you think that Florida's panhandle is just an unexplored appendage to the Sunshine State, take a look at the progress being made in the area . . . industrially. You'll be surprised!!!

Population up 29% since 1950 compared with the total U. S. gain of 10%. Manufacturing employment has risen 66% against an increase of 8% for the country as a whole. Electric energy sales are up 224% in the same period compared with the state's gain of 110% and a U. S. increase of 71%. Long famous for lumber, naval stores and beautiful beaches Northwest Florida has recently attracted a great number of pulp and paper, chemical, synthetic fiber and heavy minerals industries. Among the nationally known companies operating here are St. Regis, International and St. Joe kraft paper companies; Chemstrand's huge integrated nylon plant (largest single industry in Florida); Escambia Chemical Company's nitrogen fertilizer and polyvinyl chloride plant; Newport Industries, Armstrong Cork; American Agricultural Chemical, NRC Metal Corporation's new plant which will soon be producing zirconium,

and many others. Since 1952 aggregate capital expenditures for new plants or expansion, either planned or completed, in this area, have exceeded \$200 million. If you want your business to share in the growing markets, wealth of natural resources, fine climate and good living of Northwest Florida, write our industrial development people for details!

GEORGIA

Georgia, one of the Original Thirteen States, was named after King George II of England by the first English settlers. Nicknamed the Peach State, Georgia holds high rank in the South in both manufacturing and trade. Chief raw materials are cotton and peanuts, clays and stone.

In area the State consists of 58,876 square miles of which 58,518 are land and 358 are water. The state motto is Wisdom, Justice, Moderation; the state flower is the Cherokee Rose.

The state falls into three general sections topographically. The northern part constitutes part of the long Appalachian range of mountains. In Georgia these mountains are known as the Blue Ridge. The region is highly scenic and rich in timber resources. Some of the finest marble in the Nation is to be found there.

Central Georgia is a plateau. This is the most densely populated section and the part of the state with greatest industrial development. The entire southern part of Georgia is a low plain reaching down to the Atlantic on the East and to Florida in the South. This section is rich in agricultural products and timber, and also is a recreational region of considerable note.

In population Georgia is making substantial growth. Present inhabitants number 3,621,000; in 1950 the number was 3,445,000; in 1940, 3,124,000; in 1930, 2,909,000; in 1920, 2,896,000; and in 1910, 2,609,000.

Two of the largest plants of their kind in the world were reported to be in Georgia, according to a recent survey made by MANUFACTURERS RECORD (April 1957). Scripto, Inc., Atlanta, is said to be the world's largest producer of writing instruments, and Union Bag-Camp Corp., Savannah, the world's largest pulp and paper mill and kraft container plant. The National Contracting & Engineering Co., Inc., in Alma, was reported to be the nation's largest firm dealing exclusively with electric and control wiring of aircraft.

Georgia's current governor is Marvin Griffin, Democrat. The state capital is Atlanta.

Georgia Vice President of the Southern Association of Science and Industry is George Goodwin, Vice President, First National Bank, Atlanta. Other SASI trustees from Georgia include: E. H. Conroy, Research Director, Tennessee Corp., College Park; Mills B. Lane, President, Citizens and Southern National Bank, Atlanta; Dr. O. E. May, Vice President, Coca Cola Company, Atlanta; W. E. Mitchell, Southern States Equipment Company, Atlanta; C. D. McLendon, Vice President, Citizens and Southern National Bank, Atlanta; John K. Ottley, Jr., Liller, Neal and Battle, Atlanta; Senator Herman E. Talmadge; Fred J. Turner, President, Southern Bell Telephone and Telegraph, Atlanta; Maurice L. Wilson, Development Engineer, Georgia Power Company, Atlanta; and Charles R. Younts, President, Plantation Pipe Line Company, Atlanta.

In Florida

If your Florida-bound industry is looking for a suburban community with attractive living conditions—here's an opportunity—and a Big Welcome!

IT'S
PLANT CITY

CENTRAL to Florida's principal markets. 2 railroads — airport — highways — better climate — labor surplus — near Florida's leading deep water port. Friendly city of 14,000 offers many advantages to industry including plans for a 600-acre industrial center. There's a site for you in the World's Winter Strawberry Capital.

Write for plat map and data:

PLANT CITY DEVELOPMENT COMMITTEE

GENERAL TIME CORPORATION
109 LAFAYETTE STREET, NEW YORK 13, N. Y.

May 1, 1956.

OFFICE OF THE PRESIDENT

Mr. Scott Candler, Secretary
Georgia Department of Commerce,
Atlanta, Georgia.

Dear Mr. Candler:

When General Time Corporation decided some three years ago to establish a new plant, we studied possible locations in every part of the country. Athens, Georgia, was our first choice, and we have never regretted it.

The manufacture of Westclox and Seth Thomas electric timepieces depends upon skilled workers. We have found in Georgia an abundance of the high-caliber people we require. Their eagerness to learn new skills has made it a pleasure to train them. Athens also has other important assets, not the least of which are ample power and good water.

Our relations with fellow members of the community have been most gratifying. General Time employees who moved to Athens have found it one of those rare cities that combine a heritage of dignity and beauty with the progressive, modern American spirit that animates the new South.

Thanks to such advantages as these - and to our steadily increasing sales in the Southeast and elsewhere - we plan not only to stay, but also to expand our operations, in Georgia.

Sincerely yours,

J. J. [Signature]
President

Let the "Friendly Fulton" help your firm get located in Georgia

"Come down South and grow with Georgia" is the invitation which we extend to industrialists throughout the nation. Come and see one of the fastest growing sections in the nation. Here you will find abundant resources—labor, transportation, low building costs, favorable tax structures, and a plentiful supply of electricity and water.

Let us help you locate in Georgia. We can supply information on any community in the state or we will prepare a special survey for you. We can provide facts on any available sites, on labor supply, transportation, raw materials, utilities, taxes, wage rates and fringe benefit patterns, living conditions—all without cost or obligation. Tell us your needs. We will handle the entire matter confidentially for you. Write or call our Business Development Department today.

WHY COMPANIES AND PEOPLE CHOOSE ATLANTA

STRATEGIC FOR MANAGEMENT

Atlanta is the Distribution City for the South, as strategic for territory management as it is for distribution of goods out of Atlanta warehouses or factories. Conditions are excellent for most industries, both as to markets and production . . . an impartial and frank Industrial Bureau engineering study will be made for you without charge on request.

ATTRACTIVE TO PERSONNEL

Atlanta is a happy community, big enough (800,000 population) for a wide variety of residential areas, churches, universities and recreation, with a long outdoor season. Your people will find here the kind of home they want, and the kind of neighbors they prefer with similar cultural and scientific interests. We will gladly assist in your personnel relocation problems.

The Sky's Not The Limit!

If there's a stopping point in Southern prosperity and growth, it's not obvious from where we sit and marvel at the view. Even 1956, which put the Southeast at its *highest income peak in its history*, should take a back seat when the totals for '57 sweep in.

The reason for this upswing in prosperity can be said simply. There's plenty of room down South . . . for everything! Room for new industries to come in, room for native industries to grow in . . . room for new markets, new ventures, new ideas . . . and above all, room for people to *enjoy* their living while they're *making* their living.

The First National Bank believes that nothing will halt this steady rise in prosperity—not as long as men of vision combine *doing* with seeing. That is how it is at First National. We see . . . we do . . . we serve . . . providing old friends and new the best in banking service.

THE *First* NATIONAL
BANK OF ATLANTA

\$4.50 to \$6.00* PER SQUARE FOOT

Builds this plant for you in Georgia

Dimensions: 120' x 165'.
Steel and masonry construction. Air conditioning. Sprinkler system. Floor plan and specifications on request.

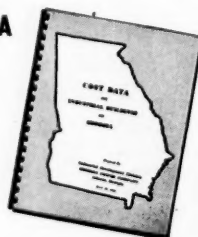

* Depending on location

Low-cost construction is only one reason so many progressive firms are locating in Georgia. It's the distribution center of the rich and growing Southeastern market. Taxes are low; so are power rates. There's plenty of intelligent, dependable native labor. And the mild, healthful climate keeps absenteeism and fuel costs at a minimum.

Yes, it's profitable to operate in Georgia. And we're here to find just the right site for you. Tell us your requirements in confidence. No obligation.

FREE BOOKLET OF BUILDING COST DATA

This booklet contains photographs, specifications and costs of several plants built recently in Georgia by national concerns. It's a book of unusual interest to any management man who contemplates building a new plant. It's yours for the asking.

KENTUCKY

Kentucky, the Blue Grass State, was admitted to the Union in 1792. The name, Kentucky, is of Indian origin meang Meadowland. The state motto is United We Stand, Divided We Fall. The state flower is Goldenrod.

The state embraces an area of 40,598 square miles, including 417 miles of water surface, situated in the heart of the Ohio River Valley. It is bounded on the north by the Ohio River, which lies within the state for nearly 700 miles, and on the west by the Mississippi River, and is veined by a number of smaller streams, including the Tennessee and Cumberland Rivers. Altogether, the state has about 2,000 miles of improved waterways navigable by commercial vessels and barges.

Topographically, the state presents considerable variations. The eastern quarter, which abounds with coal and timber, is mountainous and extensively cut by streams. The Bluegrass region, occupying the north-central part of the state, is composed of an outer area characterized by knobby hill country and a larger center portion of rich rolling upland, famed for tobacco and thoroughbred horse farms. The south central and western sections range from rocky hillsides to rolling and level land, and contain numerous caves and abundant surface and ground water supplies. In the northwest is a second major coal field, smaller and of lower relief than the eastern.

The state's population in 1956 was esti-

mated at 2,967,500, an increase of 22,700 since the 1950 census. The inhabitants are almost all native born and about one-third are classified as living in urban areas. The state is divided into 120 counties and has three metropolitan areas: Jefferson County, which includes Louisville; Campbell and Kenton Counties, which include Covington and Newport; and Boyd County, which includes Ashland.

The principal mineral resources of Kentucky are coal, petroleum, natural gas, limestone, fluorspar, clay, glass sands, and construction sands and gravel. In value of mineral output, the state ranks fifth among the sixteen Southern states and eighth in the nation; in coal alone it is the nation's third largest producer. The most important agricultural products are tobacco, livestock and corn. Timber is another leading resource.

Long an important mining and agricultural state, Kentucky is rapidly improving its position in manufacturing. Since the end of the war the number of factory employees has increased 31%, and in "value added by manufacture" Kentucky now ranks first in the 11-state Southeast in food and kindred products and electrical and non-electrical machinery, and is second in tobacco. This industrial momentum continued apace during 1956, with announcements of new and expanded plants that will involve an expenditure of more than \$225,000,000 and add a record-breaking 16,500 jobs.

Kentucky occupies a strategic market position at the gateways to the industrialized Midwest and the rapidly developing South. The nation's center of population lies just across the Ohio River in southern Illinois.

Three of the largest plants of their kind in the world are reported to be in Louisville, according to a recent survey made by MANUFACTURERS RECORD (April 1957). General Electric Co. is said to be the world's largest home appliance plant; International Harvester Co., the world's largest wheel tractor plant; and Hillerich & Bradsby Co., the world's largest manufacturer of baseball bats. National Carbide Co., Div. of Air Reduction Co., Inc., Calvert City, is reported to be the world's largest producer of calcium carbide.

Kentucky Vice President of the Southern Association of Science and Industry is Joseph H. Taylor, Assistant Commissioner of the Kentucky Dept. of Economic Development. Other SASI trustees from Kentucky include: R. E. Bisha, Industrial Agent, L & N Railroad, Louisville; and Harry Sterling, Vice President, Corning Glass Works, Harrodsburg.

Kentucky's current governor is A. B. Chandler, Democrat. The state capital is Frankfort.

LEADING INDUSTRIES

The following list of Kentucky manufacturers employing more than 100 workers has been compiled from many sources. Those who were particularly helpful, either in providing data or in checking listings, were the Kentucky Department of Economic Development, Frankfort; and the Kentucky Chamber of Commerce, Louisville.

LOUISIANA

Louisiana, in the Deep South, is nicknamed the Pelican State. Admitted to the Union in 1812, the state is sometimes known as the Nation's Sugar Bowl because of its impressive production of sugar cane.

Named after King Louis XIV of France, Louisiana ranks high in the South in trade, both foreign and domestic. Chief raw materials are cotton, rice and sugar cane, petroleum and sulphur. The state holds third rank in the Nation in production of crude oil, being led only by Texas and California. New Orleans is one of the leading ports of the United States.

Area consists of 48,523 square miles, made up of 45,177 of land and 3,346 of water. The state motto is Union, Justice, Confidence; the state flower is Magnolia Blossom.

In population, Louisiana is making good progress. Present population numbers 2,927,000; and in 1950 the number was 2,684,000; in 1940, 2,364,000; in 1930, 2,102,000; in 1920, 1,799,000; and in 1910, 1,656,000.

The state, generally, is a low-lying plain, so low that levees along the Mississippi River are necessary. Marshy in some areas, but extremely fertile throughout, great harvests of rice and sugar cane contribute mightily to derived income.

In the northern portion the topography rises considerably, and to a large degree becomes rolling and scenic. Timber is an abundant resource in this section and dairy farms dot the landscape. More sweet potatoes are grown in Louisiana than in any other state. Baton Rouge is the state capital.

Two of the largest plants of their kind in the world are reported to be in Louisiana, according to a recent survey made by MANUFACTURERS RECORD (April 1957). The Ethyl Corp., Baton Rouge, is said to be the world's largest manufacturer of tetraethyl lead, the American Cyanamid Co., in Avondale, the world's largest producer of acetylene. On the national scale, Valentine Pulp & Paper Corp.,

Louisiana's current governor is Earl K. Long, Democrat, inaugurated in 1956. The state capital is Baton Rouge.

Lockport, is reported to be the largest producer of newsprint and bagasse, Kaiser Aluminum & Chemical Corp., Chalmette, the largest aluminum reduction plant, and Esso Standard Oil Co., Baton Rouge, the largest petroleum refinery.

Louisiana Vice President of the Southern Association of Science and Industry is Joseph Horan, Research Director, Louisiana Department of Commerce and Industry, Baton Rouge. Other SASI trustees from Louisiana include: Dr. C. H. Fisher, Director Southern Regional Research Lab, New Orleans; S. G. Henry, Ethyl Corporation, Baton Rouge; and N. C. McGowen, President, United Gas Pipe Line Company, Shreveport.

LEADING INDUSTRIES

The following list of Louisiana manufacturers employing more than 100 workers has been compiled from many sources. Those who were particularly helpful, either in providing data or in checking listings, were the Louisiana Department of Commerce and Industry, Baton Rouge; and the Chamber of Commerce of the New Orleans Area.

WRITE FOR THE MONROE STORY!

The 53-page book of facts, figures and photos shown above clearly indicates that the Monroe Area — "in the middle of the Gulf South" — is the strategic location for factory or distributing warehouse. It tells about the low cost power and natural gas, service by four railroads, two airlines, major U. S. highways and navigable river, connecting with world ports . . . and it tells about Louisiana's 10-year tax exemption and industry inducement plan. For latest information about the opportunities the Monroe Area offers your company, take the first step by writing on your letterhead for "The Monroe Story."

ESTABLISHED INDUSTRIAL DISTRICT

Let us tell you about our Industrial District, a choice site of 250 acres located on major U. S. highway — served by Missouri Pacific Railroad — and adjacent to navigable Ouachita River.

LOOK TO THE LEADER—

LOOK TO:

Louisiana

If it's a Southern location you're looking for, then take a good look at Louisiana, which last year jumped to second in the nation in chemical plant construction.

IN 1956

More than \$563 million worth of new industry located in this rapidly-expanding State in the Deep South

Raw Materials in quantity: oil, natural gas, lumber, sulphur, salt, clay, sand, gravel and water.

Markets: Louisiana itself, Mid-Continent USA, Latin America, the World! *Transportation:* sea, rail, air, motor or the 7,300 miles of navigable inland waterways. *Good Tax Structure:* 10-year exemption on all state, parish and municipal property taxes.

Climate and Labor: willing hands and a warm, sunny climate guarantee a genuine 12-month production with no cutbacks.

If you're planning extension in the South, get *all* the facts about Louisiana. Write on your company letterhead to:

GOV. EARL K. LONG
State Capitol,
Baton Rouge, La.

OR

CURT SIEGELIN, Director,
Dept. of Commerce & Industry,
Capitol Annex,
Baton Rouge, La.

MARYLAND

MARYLAND

Maryland, the Old Line State, is one of the Original Thirteen. Named after Queen Henrietta Maria of England, the state ranks high in industry of many types.

The state motto is Manly Deeds, Womanly Words. The state flower is Blackeyed Susan. Chief raw materials are livestock and tobacco, coal, sand and gravel.

In area 10,577 square miles are embraced,

9,887 being land and 690 being water. Population is growing steadily with a current count of 2,669,000.

The Chesapeake Bay divides the state into two parts. The region around the Bay is a coastal plain with fine harbors along the indented shore. Fisheries are of prime importance in this section with oysters, bluefish, bass and other varieties abounding. The soil of this section also is very fertile making it ideal for crop and truck farming.

Maryland's current governor is Theodore McKeldin, Republican. The state capital is Annapolis.

The rest of the state falls into two general sections. In the north central part is the Piedmont plateau, noted for prosperous dairy farms. The western part rises to the level of the Appalachian Range, with high hills and deep valleys. Mining is a leading industry in that section. Baltimore is one of the great ports of world trade. Annapolis is the state capital.

Of the fifty-six plants reported to be the largest of their kind in the nation and world in a recent survey made by MANUFACTURERS RECORD (April 1957), the greatest number were Maryland plants. Eleven industries were said to be the largest on a national scale, and six of these the largest in the world. Most of these plants were in the field of primary and fabricated metals, electrical equipment, and chemicals. All but one are located in Baltimore.

Maryland Vice President of the Southern Association of Science and Industry is D. C. W. Ward, Jr., Vice President of the Union Trust Company of Maryland in Baltimore. Other SASI trustees from Maryland include: Dr. E. Emmet Reid, Consultant, Baltimore, and Richard H. Turk, President, Pemco Corporation, Baltimore.

LEADING INDUSTRIES

The following list of Maryland manufacturers employing more than 100 workers has been compiled from many sources. Those who were particularly helpful, either in providing data or in checking listings were the Maryland Department of Labor & Industry, Baltimore; Maryland State Planning Commission, Baltimore; and the Baltimore Association of Commerce.

MISSISSIPPI

Lying in the heart of the Deep South, Mississippi, nicknamed the Magnolia State, ranks high in agricultural output. The state motto is By Valor And Arms. The state flower is the Magnolia Blossom. Mississippi was admitted to the Union in 1817. Chief raw materials are cotton and corn, timber and petroleum.

In area the state covers 47,716 square miles of which 47,420 are land and 296 are water. In population there has been some loss in recent years as numbers of farm workers have migrated to industrial centers to take part in the postwar boom. Population now numbers 2,111,000, against 2,179,000 in 1950; 2,184,000 in 1940; 2,010,000 in 1930; 1,791,000 in 1920 and 1,797,000 in 1910.

Mississippi is made up, for the most part, of hills and rolling prairies. Generally fertile throughout, the most fertile section is found in the Mississippi Delta in the southwestern part and in the entire Mississippi Valley along the western border.

In the central portion are uplands known as the North Central Hills where peanuts and a variety of fruits flourish. In the northeast are the Tennessee Hills, highest point in the state. Timber is an important resource of this section. Southward from this high point is found a rolling grassland section where cattle raising is becoming more and more important. In the southeastern part of the state is what is known as the Piney Wood section, with rich output of lumber, turpentine and tar.

Along the Gulf coast are sandy meadows with watery inlets that are ideal for fishing. Many vacation resorts have sprung up in this area, which contains the longest manmade beach in the world—26 miles long. Jackson is the state capital.

Mississippi is reported to have the largest completely integrated furniture and cabinet plant in the nation—Mississippi Products, Inc., in Jackson—according to a recent survey made by MANUFACTURERS RECORD (April 1957) of the largest plants in the nation and world.

Mississippi Vice President of the Southern Association of Science and Industry is John D. Wise, President, Wise Motor Company, Hazlehurst. Other SASI trustees from Mississippi include: Dr. M. P. Etheredge, Mississippi State College; R. E. Dumas Milner, President, Milner Enterprises, Jackson; and Les M. Taylor, Vice President, Mississippi Power and Light, Jackson.

LEADING INDUSTRIES

The following list of Mississippi manufacturers employing more than 100 workers has been compiled from many sources. Those who were particularly helpful, either in providing data or in checking listings, were the Mississippi Agricultural & Industrial Board, Jackson; Mississippi Manufacturers Association, Jackson; North Mississippi Industrial Development Association, West Pont; and the Jackson Chamber of Commerce.

Did You Know?

MANUFACTURERS RECORD, first in the South since 1882, today provides top coverage of Southern industry. Latest circulation audits reveal that the RECORD now reaches 25 percent more Southern manufacturers than the nearest competitive publication. Write for a complete analysis of the RECORD's circulation to determine how it can help you increase your sales in the booming South.

Take advantage of Mississippi's "tailor-made" industrial plan

***Our BAWI Program Opens New
Doors to Management in Helping
Select Profitable Plant Locations***

"Mississippi—through its famed Balance Agriculture With Industry program—can help you obtain a custom-designed location for your plant. Forward-looking communities of all sizes in every part of our state are eager to help you find the right site. In addition to enjoying the many direct advantages of BAWI, industry moving to Mississippi benefits from exceptional cooperation at all levels—state, county and municipal. Your inquiry is invited—addressed either to me or to Executive Director Henry Maddox.

We want you to know Mississippi."

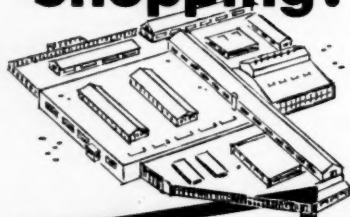

J. P. Coleman
GOVERNOR OF MISSISSIPPI

Mississippi Agricultural & Industrial Board

JACKSON, MISSISSIPPI

**Locate your new plant
on THE FERNWOOD, COLUMBIA AND GULF RAILROAD COMPANY
or BONHOMIE AND HATTIESBURG SOUTHERN RAILROAD COMPANY**

SOUTHEAST MISSISSIPPI

Set your sights on this progressive 23-county area for your new plant location and you'll hit the bull's eye of a new Southern market. This rapidly growing industrial area is linked to domestic and foreign markets by an excellent transportation system including air, rail and highways — plus ocean shipping through deep water ports. Add to this, abundant raw materials, plenty of low cost electrical energy, healthy, pleasant year-round climate, friendly, cooperative people who are anxious for your plant operation to be a success, and it's easy to see why so many industries have already hit the bull's eye by locating in Southeast Mississippi.

Western Mississippi, the crossroads of the New South, offers:

- Markets—23 million people within a 400 mile radius.
- Labor—3 to 7 applicants available for each industrial job opening.
- Government—"Balance Agriculture With Industry" plan and tax exemption law.
- Climate—Annual average temperature of 65.4 degrees.
- Transportation—21 railroads, 2 national airlines, over 4,000 miles of paved highways.

Let us give you complete information on how a plant located in Western Mississippi can increase your profit margin. Just contact:

DEPARTMENT OF MARKETING & DEVELOPMENT MISSISSIPPI POWER & LIGHT COMPANY

Electric Building, Jackson, Mississippi

The South leads the nation in production of peaches, peanuts, peanut butter, sugar cane, sweet potatoes, green onions, pineapples, and rice.

NORTH CAROLINA

North Carolina, known as the Tar Heel State, is one of the Original Thirteen. The state motto is To Be Rather Than To Seem. The state flower is the Dogwood Blossom. The state name is derived from Latin "Carolus," in honor of King Charles I of England. North Carolina was admitted to the Union in 1789.

In area the state is made up of 49,142 square miles of land and 4,570 square miles of water to constitute a total of 53,712 square miles. The population in 1940 was 3,571,000 and by 1950 had increased to 4,039,000. The estimated population for 1955 was 4,349,000.

Among the Southern states North Carolina ranks first in tobacco, textile, lumber and furniture manufacturers. Principal raw materials are cotton, tobacco, peanuts, tungsten and sand-gravel.

The R. J. Reynolds Tobacco Co., in Winston-Salem, is reported to be the largest tobacco company in the nation, according to a recent survey made by MANUFACTURERS RECORD (April 1957).

North Carolina falls readily into three nearly equal sections. The eastern part is a broad coastal plain where tobacco, cotton and peanuts flourish. Along the coast are many inlets, and these usually have around them vacation resorts. Cape Hatteras, a rugged sandbar extending far into the Atlantic Ocean, is a well-known land-mark. The central portion is a fertile rolling plateau often spoken of as the Piedmont section. This is the most populous part of the state, and here also is located the greatest plant capacity for heavy industry. The western portion is mountainous—high and rugged—with great scenic beauty and flourishing summer resorts. The mountains in this section are among the highest of the South. Raleigh is the state capital.

NORTH CAROLINA

North Carolina's current governor is Arthur H. Jones, Vice President, American Trust Company in Charlotte. Other SASI trustees from North Carolina include: Dr. Willard Berry, Duke University, Durham; Dr. Paul Gross, Vice President, Duke University; Dr. C. F. Korstian, Duke School of Forestry; R. N. Marshall, Western Electric Company, Winston-Salem; John Harden, Vice President, Burlington Industries, Inc., Greensboro.

LEADING INDUSTRIES

The following list of North Carolina manufacturers employing more than 100 workers has been compiled from many sources. Those who were particularly helpful, either in providing data or in checking listings, were the North Carolina Department of Conservation and Development, Raleigh; and the North Carolina Department of Labor, Division of Statistics, Raleigh.

**THIS
GOVERNOR
SPEAKS
INDUSTRY'S
LANGUAGE**

— he is the State's No. 1 salesman of

NORTH CAROLINA

advantages for new and expanding industry.

With an outstanding two-year record, and going into a full four-year term backed by a tremendous vote of confidence, Governor Luther H. Hodges' business-like administration is prepared to follow through its policies of friendly cooperation with industry locating and expanding in North Carolina.

Governor Hodges knows industry's problems from his own thirty-year career in business, spanning a rise from mill hand to managing head in charge of manufacturing and sales for the textile plants of Marshall Field & Company, with a multi-million dollar volume.

The experience and energy of Governor Hodges is being applied throughout State Government. His leadership is attracting the support and participation of other successful North Carolina business men in maintaining and improving the favorable industrial climate of North Carolina.

The Governor's Research Triangle Development Council is working on a program to make full use of the research facilities in the geographic area which includes N. C. State College, Duke University and the University of North Carolina—all within a 25-mile radius.

Establishment of more vocational training schools to increase the numbers of skilled workers in North Carolina's vast labor pool has the active support of Governor Hodges.

This business-conscious administration is building a bright future for industry in North Carolina—the State which already has a record of outstanding success stories in American Business.

Pertinent information about varied plant location opportunities for your company will be sent quickly and in strict confidence—write or wire William P. Saunders, Director, Department of Conservation and Development, Raleigh 7—

Foresight = Good Site

Close on the heels of the remarkable success of its Thrift Road Industrial District in Charlotte, now home for 48 plants and warehouses, the P & N Railway has started the development of a new and much larger planned district near Charlotte—the Chemway Industrial District.

Before we could move a yard of earth on this project sites had been sold to Allis-Chalmers, left, completed; B. F. Goodrich, center, nearly completed; and A & P, right, just starting. With the immediate popularity of this district a demonstrated fact, we are rushing improvement of a 60-acre section, top. Availability of graded sites with water, sewer, rail siding, superb access to major highways, and other important advantages assures Chemway of a bright future.

The P & N offers similar industrial sites in half a dozen major Piedmont Carolina cities. For full information, contact Thomas G. Lynch, Director of Industrial Development, Box 480, Charlotte, N. C.

For Industrialists—High Point, N. C.

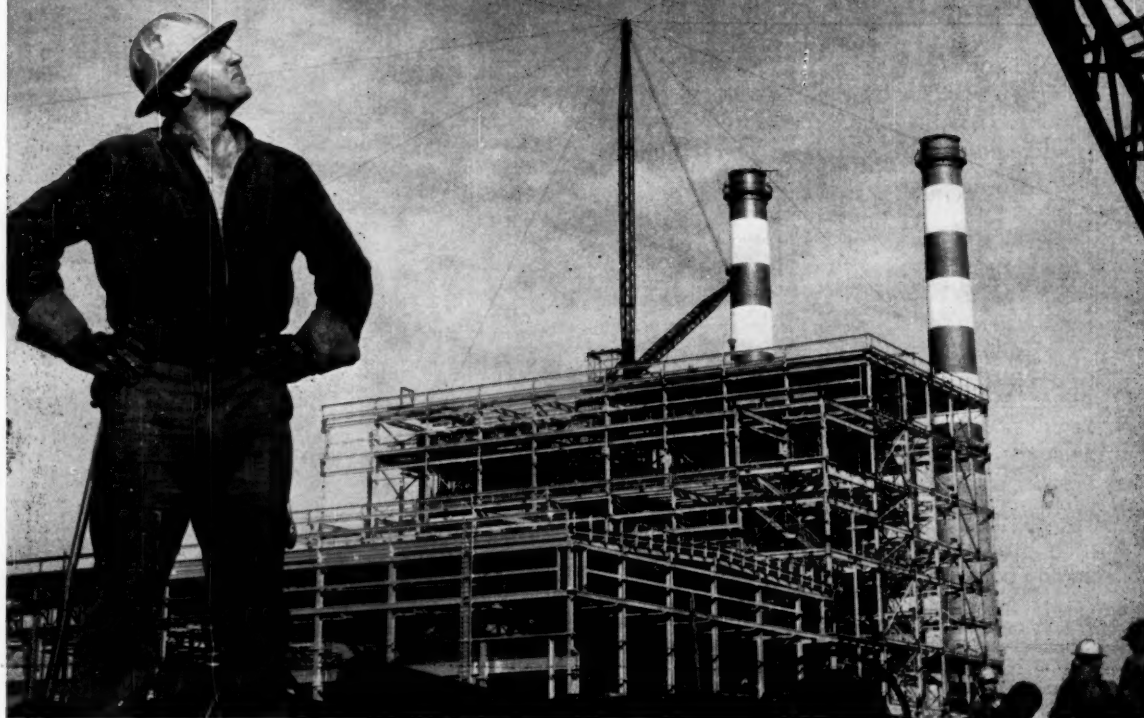

(population 42,000 — 1957 estimate 46,000)

... has the magic combination of markets, materials and labor. Excellent transportation facilities, ample power and water, ideal sites. 25 mile radius trade population 350,000. Fine climate, progressive city administration, excellent schools, recreational facilities. Write for complete information.

Industrial Development Division

HIGH POINT CHAMBER OF COMMERCE

NEW GIANT in the PIEDMONT

Low priced power and plenty of it for your expanding industry — that is the meaning of the giant Allen plant now nearing completion. Investment of millions annually on the Duke System keys power production to a dynamic growth pattern: young and intelligent manpower, trained or quickly trainable, healthy

rural communities for industry, growing population and incomes creating a big home market, and aggressive statewide programs for a sound balance between industry and agriculture.

Insure your own plant future with a site in the Piedmont Carolinas!

For the *RIGHT LOCATION* for your operation

CONSIDER the Community Attitude ---

Plant Location Consultants know that no two industries look for the same tangible factors when selecting a new plant site. They also realize that one intangible factor is specifically sought by all industries. It is the **COMMUNITY ATTITUDE** toward new industry.

Will local citizens heartily welcome the newcomer? Will local government treat the newcomer fairly? The answer is definitely **YES** in The Carolinas. Here, the friendly factor is abundantly available. It helps make the Finer Carolinas the right location for your operation.

We invite you, without obligation, to use our experienced plant location services. Just send us an outline of your specific requirements. We can then pre-select appropriate sites for your on-the-spot evaluation. Your inquiry will be kept in close confidence.

OKLAHOMA

OKLAHOMA

One of the states of the great southwest, Oklahoma was admitted to the Union in 1907. Nicknamed the Sooner State, high rank is held in agricultural and mineral output. The state motto is Labor Conquers All Things. The state flower is Mistletoe. The name, Oklahoma, is of Indian Origin signifying Red People. Chief raw materials are livestock and wheat, coal, zinc and petroleum.

In area the state embraces 69,919 square miles. Of these 69,283 are land and 636 are water. In population there has been moderate recent loss through migration from agricultural to industrial centers. Count of inhabitants in 1955 was 2,168,000; in 1950, 2,233,000; in 1940, 2,336,000; in 1920, 2,028,000; and in 1910, 1,657,000.

More than 100,000 Indians live in the state—more than in any other of the 48 states. This is largely by reason of the fact that before admission to the Union the area now embraced in the state served as a territory sheltering the five Civilized Indian Tribes—Cherokee, Choctaw, Chickasaw, Creek and Seminole.

Oklahoma is mostly a rolling prairie, but with the exception that the extreme eastern part contains low parts of the Ozark and Ouachita Mountains. These are covered with dense forests and in part contain rich oil deposits. Most of the rest of the state is made up of large ranches engaged in cattle raising or wheat growing. Oklahoma City is the state capital.

In a recent survey made by MANUFACTURERS RECORD (April 1957) of the largest plants in the nation and world, the Halliburton Oil Well Cementing Co., in Duncan, Oklahoma, was reported to be the largest of its type in the nation.

Oklahoma Vice President for the Southern Association of Science and Industry is Dr. Otto M. Smith, Oklahoma A & M College. Other SASI trustees from Oklahoma include: Dr. George L. Cross, President, University of Oklahoma; Dean A. McGee, President, Kerr-McGee Oil Industries, Oklahoma City; and E. K. Gaylord, Oklahoma Publishing Company, Oklahoma City.

Oklahoma's current governor is Raymond Gary, Democrat. The state capital is Oklahoma City.

LEADING INDUSTRIES

The following list of Oklahoma manufacturers employing more than 100 workers has been compiled from many sources. Those who were particularly helpful, either in providing data or in checking listings, were the Oklahoma Development Council, Oklahoma City; Oklahoma Department of Commerce & Industry, Oklahoma City, Oklahoma City Chamber of Commerce; and the Bureau of Business Research of the University of Oklahoma, Norman.

SOUTH CAROLINA

SOUTH CAROLINA

Nicknamed the Palmetto State, South Carolina is one of the Original Thirteen. Named after Charles I of England, the first permanent settlement was established at Charleston during that Monarch's reign. The state motto is Ready With Minds And Resources. The state flower is Yellow Jasmine.

Area consists of 31,055 square miles—30,594 land, 461 water. In population the state shows moderate growth. Inhabitants numbered 2,283,000 in 1955; 2,117,000 in 1950; 1,900,000 in 1940; 1,739,000 in 1930; 1,684,000 in 1920; and 1,515,000 in 1910.

South Carolina ranks high both in the South and Nation in textile manufacture. Once largely agricultural, in industrial structure, the state has paced the South in recent years in manufacturing development; but most of this gain has been in textiles. Chief raw materials are cotton and tobacco, sand, gravel and stone.

Topographically, the eastern two-thirds of the state is a coastal plain, with large portions covered with forest. From this plain the land level rises gradually to the Piedmont region in the northwest. Columbia is the state capital.

South Carolina Vice President for the Southern Association of Science and Industry is W. C. Coleman, Vice President, Citizens and Southern National Bank, Columbia. Other SASI trustees from South Carolina include: Allan C. Mustard, Jr., Commercial Manager, S. C. Electric and Gas Company, Columbia; Dr. Robert F. Poole, President, Clemson Agricultural College; Dr. John R. Sampey, Furman University; Dr. J. E. Copenhaver, Sonoco Products Company, Hartsville; and Charles E. Daniel, President, Daniel Construction Company, Greenville.

South Carolina's current governor is George B. Timmerman, Jr., Democrat. The state capital is Columbia.

LEADING INDUSTRIES

The following list of South Carolina manufacturers employing more than 100 workers has been compiled from many sources. Particularly helpful in providing data was the South Carolina State Development Board, in Columbia.

Abbeville

Ten Good Reasons . . .

. . . why you should advertise regularly in MANUFACTURERS RECORD

1. First in the South, established in 1882. One of nation's first business publications.
2. Provides more extensive editorial coverage of Southern industrial progress than any other medium.
3. Audience includes 25 per cent more Southern manufacturers than nearest competitive medium.
4. Reaches new plant operators FIRST by virtue of extensive New Plant Reporting Service.
5. Authoritative—official publication of Southern Assn. of Science and Industry, region's foremost development body.
6. Emphasis on growth industries. Special editorial coverage every month.
7. Research. Annual Blue Book edition is South's standard reference source.
8. Prestige. Quoted in daily papers, by governors, by key industrialists.
9. Reference value. On file in major libraries for decades. Copies filed in most business offices.
10. Expert staff headed by McKinley Conway. Editors have nine college degrees, years of experience in South.

Conway Publications
North Atlanta 19, Ga.

The Empire State Building, the Chrysler Building, the Wrigley Building, the Merchandise Mart, the Lever Building, the buildings of Rockefeller City and many, many more could not house all the offices and plants of the great industries that have moved into **SOUTH CAROLINA** in the last 10 years.

Follow the leaders to American Industry's smartest new address—the NEW South Carolina, where government, industry and labor are a working team . . . where natural resources, power and pure, soft water are abundant . . . where transportation by rail, by truck, air and sea keeps round-the-clock schedules . . . and where largest segment of U. S. buying income is within less than 600 miles.

Important note: Write or phone State Development Board, Box 927, Columbia, S. C. (Long Distance 94) for "10 Years of Progress," 49 pages of vital facts on South Carolina.

TENNESSEE

Tennessee, the Volunteer State, derives its name from an Indian Village that once existed within its territory. Admission to the Union occurred in 1796. The state motto is Agriculture And Commerce. The state flower is Iris.

Area consists of 42,246 square miles of which 41,961 are land and 285 are water. In population growth the state is doing very well. Number of inhabitants was 3,417,000 in 1955; 3,292,000 in 1950; 2,916,000 in 1940; 2,617,000 in 1930; 2,338,000 in 1920; and 2,185,000 in 1910. Chief raw materials are cotton and corn, coal, copper and stone.

Tennessee divides naturally into three regions. In eastern Tennessee are two mountain ranges, the Great Smokies, and the Cumberland with the Valley of East Tennessee between. This is the valley of the Tennessee River, home of the Tennessee Valley Authority and the first atomic energy center at Oak Ridge. Mining and lumbering are the principal industries of this region.

Central Tennessee is a high plateau surrounded by other highlands, rich in good farm lands and in raw materials of many kinds. Western Tennessee lies in the Mississippi River Valley confines and is low and flat. It is a great cotton growing region. Nashville is the state capital.

Tennessee is reported to have five of the largest plants of their kind in the nation and world, according to a recent survey made by MANUFACTURERS RECORD (April 1957). Four of these are the largest in the world, and include the manufacturing of cowboy boots, soft drink bottles, books, and hardwood flooring.

Tennessee Vice President for the Southern Association of Science and Industry is Porter Grace, Vice President of the Union Planters National Bank in Memphis. Other SASI trustees from Tennessee include: Enoch Brown, President, Memphis Publishing Company; Dr. J. H. Coulliette, University of Chattanooga; Carl McFarlin, President, Tennessee Products and Chemical Corporation, Nashville.

Tennessee's current governor is Frank G. Clement, Democrat. The state capital is Nashville.

LEADING INDUSTRIES

The following list of Tennessee manufacturers employing more than 100 workers has been compiled from many sources. Particularly helpful in providing data was the Tennessee Industrial & Agricultural Development Commission, Nashville.

A New, Modern Air-Conditioned Plant for \$5.00 a Sq. Ft. or Less

Authoritative figures show that you can build a modern manufacturing plant in Tennessee for \$3.25 to \$3.75 a square foot without air-conditioning and for \$4.50 to \$5.00 a square foot with air-conditioning throughout. These figures are based on buildings of masonry construction, modern in every respect. Actual figures on other buildings constructed recently show similar low costs. For further details on construction costs and Tennessee's other industrial advantages, write in confidence for the 28-page "Basic Data" booklet and folder below.

TEXAS

Texas became part of the Union in 1845. Admission was by treaty since Texas previously was a nation and not a territory like all other states except the original thirteen. The name, in Indian tongue, means Friends or Allies. The state motto is Friendship and the state flower is Bluebonnet. Chief raw materials are livestock and cotton, sulphur and petroleum.

In area the state is the largest of all, consisting of 267,339 square miles—263,644 land and 3,695 water. In population the state displays excellent growth. Number of inhabitants in 1955 was 8,563,000; in 1950, 7,678,000; in 1940, 6,415,000; in 1930, 5,825,000; in 1920, 4,663,000; and in 1910, 3,897,000.

Texas leads the South in practically all categories of domestic trade, and vies with Maryland and Louisiana for leadership in foreign trade.

The state is so large that it is difficult to describe topographically. Eastern Texas along the Gulf shore is part plains, part prairie and part forest. Some of the most valuable of the Nation's oilfields are in this region.

Central Texas is part of the Great Plains. Cotton, wheat and livestock flourish there. The northern part is heavily populated and contains wealthy oil wells.

Southwestern Texas is high and flat, with Rocky Mountain foothills. Irrigation has made possible large and prosperous ranches in this area. Northwestern Texas, while less fertile, contains highly valuable mineral deposits. Austin is the state capital.

Eight of the largest plants in their field in the nation are reported to be in Texas, according to a recent survey made by MANU-

Price Daniel, Democrat, is the recently elected governor of Texas. The state capital is Austin.

FACTURERS RECORD (April 1957). Four of these are primary and fabricated metal industries. Dow Chemical Co., in Freeport, and Convair Division of General Dynamics Corp., in Ft. Worth, were reported to be the largest in the chemical and aircraft industries in the nation.

Texas Vice President for the Southern Association of Science and Industry is E. T. Lindsey, Plant Manager, Celanese Corporation, Bishop. Other SASI trustees from Texas include: Tom Slick, oil producer, San Antonio; Dr. C. L. Shrewsbury, Associate Director, Southwest Research Institute; Dr. Harold Vagtborg, President, Southwest Research Institute; and Howard Tellepsen, President, Tellepsen Construction Co., Houston.

LEADING INDUSTRIES

The following list of Texas manufacturers employing more than 100 workers has been compiled from several sources. Particularly helpful in providing data was the Bureau of Business Research of the University of Texas, Austin.

"COMMUNITYLAND"

...is

OPPORTUNITY LAND

...for industries seeking economical operation near fast growing markets in the great Southwest

In addition to the well-known advantages of rapidly growing population and buying power and mild climate in the great Southwest, your plant located in "Communityland," Texas, offers these specific advantages:

- Lower costs for site and buildings than in a "big-city" location.
- Lower cost of living, resulting in lower labor costs and reduced personnel turnover.
- Lower taxes than in most large metropolitan areas. No state sales or income taxes.
- Ample cooperative native-born labor.
- Low cost dependable electric power. Abundant natural gas from nearby gas fields.

Write our Commercial Department about plant sites in any city listed here. Your inquiry handled in confidence.

Industry chooses this area . . .

. . . for profitable operation in an expanding market!

The rapidly developing area served by Texas Electric Service Company is on the march industrially. Leading manufacturers are locating here and existing facilities are being expanded.

By selecting this area, industries benefit from a location in the heart of an expanding \$17 billion five-state market. Here industry enjoys many advantages, including varied natural resources, favorable climate, cooperative workers and a well-rounded economy, based on manufacturing, oil, livestock and agriculture.

Dependable low-cost electric power for continued industrial development is provided by the strong power system of Texas Electric Service Company. The Company continues to plan and build ahead to keep pace with the progress of the area.

When you are seeking a location for new manufacturing or distribution facilities, we invite you to use the services of our Area Development Department. Inquiries are held confidential.

Picture Story THE NEW DIVERSIFIED ECONOMY IN CENTRAL-EAST TEXAS

Big things are taking place in Central-East Texas. For many years predominantly agricultural, this productive area continues to go forward in farm products, but a new diversified economy is rapidly developing as a result of new processing and manufacturing plants together with expanded oil and gas activities.

AGRICULTURE

Cotton, corn, tomatoes, melons, peaches, plums, berries, potatoes, beef and dairy cattle, chickens, turkeys.

MEDICAL CENTERS

Millions of dollars invested in modern medical and health resort centers.

LUMBER

Saw mills, flooring mills, furniture, basket mills, boxes, pressed wood.

PROCESSING

Vegetable, meat, milk and poultry processing, packing and canning.

MANUFACTURING

Textile goods, toys, garments, upholstered furniture.

WAREHOUSING DISTRIBUTION

Railway and highway networks provide easier product distribution to consumers.

OIL AND GAS

Exploration, drilling, production, pipeline and processing.

OUR PLANT LOCATION SPECIALISTS ARE AT YOUR SERVICE

Whatever your needs for a new plant location, the Texas Power & Light Company's industrial specialists can give you the full facts about locations in the Texas Bright Spot... the area served by TP&L.

These men always have the facts up-to-date and readily available, because our business of supplying electric service takes them into factories, business offices, stores, homes and farms throughout our service area... a progressive 47,000-square mile section of North, Central and East Texas, comprising 466 cities, towns and communities.

Tell us about your needs for a new plant site. Your inquiry will be treated in strict confidence.

Consider these advantages

- Center of a 27-billion dollar market
- Excellent transportation, providing access to national and world markets
- Favorable tax structure — no sales tax — No state income tax
- Reasonably priced, spacious sites with plenty of room to grow
- Ample, low-cost electric power
- Friendly, native-born workers
- Courteous, cooperative city and state officials
- Raw materials available from nearby sources

Sell the South

At a cost of less than a penny per customer !!

Yes, through MANUFACTURERS RECORD, you can send your sales message regularly to the biggest industrial customers in a booming 15-state region at a rate of less than one cent for each message.

150,000 messages per year!

Yes, the total distribution of the RECORD now amounts to more than 150,000 copies per year—twelve monthly issues plus the big annual edition which combines the BLUE BOOK OF SOUTHERN PROGRESS and the SOUTHERN INDUSTRIAL DIRECTORY.

You can now reach this huge market with a minimum-size display ad (one-sixth page) for a total of only \$754—\$58 for each of 13 insertions.

This is the most economical and most effective manner in which you can keep your name before the fastest-growing industrial area in the nation. Can you afford NOT to make this minimum investment?

Start running your message next month. Write, wire or call

VIRGINIA

Virginia, named after the Virgin Queen, Elizabeth of England, is one of the Original Thirteen. Nickname is Old Dominion. The state motto is Thus Always To Tyrants. The state flower is the Dogwood Blossom. Chief raw materials are tobacco and corn, coal and copper.

Area consists of 40,815 square miles, of which 39,899 are land and 916 are water. Population shows steady growth. Count of inhabitants in 1955 totaled 3,579,000; in 1950, 3,319,000; in 1940, 2,678,000; in 1930, 2,422,000; in 1920, 2,309,000; and in 1910, 2,062,000.

The eastern part of Virginia is a broad coastal plain known as the Tidewater region. Tobacco and truck crops flourish in this area. The area also contains important cities including Norfolk, Richmond, Portsmouth, and Newport News. Shipbuilding and tobacco manufacturing are important industries in this area. Fastest growing industry, however, is chemical manufacturing.

The central part of the state is a plateau with fine grazing lands and thriving dairy farms. Tobacco and corn are the principal crops. Western Virginia has two mountain chains, the Blue Ridge and the Alleghenies. Between the two is a broad fertile valley in which fruit growing and poultry raising flourish. Most of Virginia's rich mineral deposits are found in the western section. Richmond is the state capital.

Virginia is reported to have two "firsts" in the textile field, according to a recent survey made by MANUFACTURERS RECORD (April 1957) of the largest plants in the nation and world. The Dan River Mills, Inc., in Danville, is said to be the largest single-unit textile mill in the world, and E. I. duPont de Nemours & Co., Inc., in Martinsville, the nation's largest producer of nylon. Virginia Vice President for the Southern Association of Science and Industry is Blanton Bruner, Head, Technical Information Division, American Tobacco Company in Richmond. Other SASI trustees from Virginia include: Lloyd C. Bird, President, Phipps and Bird, Richmond; Thomas C. Boushall, President, Bank of Virginia, Richmond; Senator Harry F. Byrd, Washington, D. C.; Edwin Cox, Vice President, Virginia-Carolina Chemical Company, Richmond; Colgate W. Darden, Jr., President, University of Virginia; E. S. Harlow, Coordinator of Research, American Tobacco Company, Richmond; Raymond Long, Director, Virginia Division of Planning and Economic Development; Dr. James W. Mullen II, Experiment, Inc., Richmond; H. R. Hammer, American Tobacco Company, Richmond; Warren T. White, Assistant Vice President, Seaboard Air Line Railroad Company, Norfolk; O. D. Dennis, President, Dominion Oil Company, Richmond; Dean Earl B. Norris, V. P. I. Research Foundation, Blacksburg; Dr. Marcelus H. Stow, Washington and Lee University,

Lexington; Edward A. Wayne, Vice President, Federal Reserve Bank of Richmond; J. Harvie Wilkinson, Jr., Executive Vice President, State-Planters Bank and Trust Company, Richmond; and Shields Johnson, Vice President, Times-World Corporation, Roanoke.

LEADING INDUSTRIES

The following list of Virginia manufacturers employing more than 100 workers has been compiled from many sources. Those who were particularly helpful, either in providing data or in checking listings, were the Virginia State Chamber of Commerce, Richmond; and the Virginia Electric & Power Co., Richmond.

Cecil H. Underwood, Republican, is the recently elected governor of West Virginia. The state capital is Charleston.

states with valuable deposits of coal. West Virginia is sometimes called the Panhandle State because of two panhandle areas within its boundaries. One such area is in the east, the other in the north. The eastern panhandle is a fertile plain drained by the Potomac River. The northern panhandle along with the whole northwestern part of the state is also a lowland, drained by the Ohio River. The best farm lands of the state are in this area.

The central part of West Virginia is a portion of the Appalachian Plateau, a region of high hills and deep valleys with important deposits of coal and petroleum. Charleston, the capital, is located in this region.

Two of the largest plants in the nation or world in the metals and glass industries are located in West Virginia, according to a recent survey made by MANUFACTURERS RECORD (April 1957). International Nickel Co., in Huntington, is reported to be the world's largest producer of nickel and nickel alloys, and Fostoria Glass Co., in Moundsville, the nation's largest producer of handmade table glassware.

Industrial development and tourist promotion activities in the state are conducted under the leadership of the West Virginia Industrial and Publicity Commission. The executive director is Andrew V. Ruckman.

West Virginia Vice President for the Southern Association of Science and Industry is Andrew V. Ruckman. George S. Engle, President, Atlantic Greyhound Corporation, Charleston, is SASI trustee from West Virginia.

LEADING INDUSTRIES

The following list of West Virginia manufacturers employing more than 100 workers has been compiled with the help of the West Virginia Industrial & Publicity Commission, Charleston.

WEST VIRGINIA

Nicknamed the Mountain State, West Virginia leads the South and the Nation in bituminous coal production. Once part of the State of Virginia, the name is for Queen Elizabeth of England, known as the Virgin Queen. The state motto is Mountaineers, Always Free. The state flower is Rhododendron. West Virginia became a state in 1863. Most valuable raw materials are livestock and hay, coal and petroleum.

In area the Mountaineer State takes in 24,181 square miles, of which 24,000 are land and 181 are water. With respect to population the state is just about holding its own. Inhabitants in 1955 numbered 2,002,000; in 1950, 2,006,000; in 1940, 1,902,000; in 1930, 1,729,000; in 1920, 1,464,000; and in 1910, 1,221,000.

The Allegheny Mountains separate West Virginia from Virginia and supply both

**Put your plant in the center
of this Rich Market Area**

WEST VIRGINIA

Manufacturers seeking new and more profitable locations should look first at the State which offers the best chance to grow and expand . . . WEST VIRGINIA! Here is the basic check list:

MARKETS are near!

Four of the five largest markets in the United States . . . New York, Philadelphia, Chicago and Detroit . . . are within 500 miles of the center of WEST VIRGINIA.

LABOR is plentiful and versatile!

Industry now in WEST VIRGINIA has found that the labor supply is abundant, dependable and adaptable, quick to learn and quick to produce.

TRANSPORTATION is excellent!

Year-round navigable waterways available . . . railroads make fast connections with principal cities everywhere. Motor freight speeds over modern highways, including a new turnpike which saves shippers time and

money. All parts of the state accessible by excellent airline facilities.

PLENTY of coal and power!

Here you'll find the world's greatest known coal reserves. Natural gas, too, in ample quantities. West Virginia's electrical expansion has more than kept pace with industry. Aggressive electric companies produce a constantly expanding supply of low-cost electric power.

OTHER natural resources!

West Virginia is a storehouse for natural resources. Limestone, sandstone, sand and gravel, glass sand, shales and clays, brine salt, rock salt, the finest hardwoods in the world, a good industrial water supply . . . all can be found in abundance in West Virginia.

Also, an important part of West Virginia's list of advantages is its even climate. . . . West Virginia in every way is a good place to do business and enjoy pleasant living.

Cooperative civic and governmental agencies will be happy and eager to assist you in obtaining information about WEST VIRGINIA. Address your inquiry to: Andrew V. Ruckman, Executive Director, West Virginia Industrial & Publicity Commission, State Capitol Building, Room 1957, Charleston 5, West Virginia.

Primary refining	333	X-Ray apparatus	3693
Rolling, drawing, alloying	335	Zinc	
		Primary smelting & refining	333
		Rolling, drawing, alloying	335

Classified "Where To Buy It" Section

This Classified Products Section of the BLUE BOOK-DIRECTORY is designed to provide a key to sources of supply of the many important industrial products and services purchased in increasing volume by expanding Southern industry. It complements a series of lists being published in the regular monthly issues of the RECORD.

In recent months, the RECORD has carried detailed listings of Southern manufacturers of such products as air-conditioning equipment, protective coatings, and fabricated metals. Subsequent issues of the RECORD will list manufacturers of industrial chemicals, office equipment, industrial textiles, and maintenance materials.

Both in the regular monthly reports and in this BLUE BOOK section, industries are listed according to the Standard Industrial Classification System advocated by the U.S. Department of Commerce. For convenience, an alphabetical cross-reference is provided on the preceding page.

The following index covers only manufactured products used widely by industry. It does not cover mining operations. And in most cases it gives only those suppliers who employ 100 or more workers.

Subsequent studies will be expanded steadily, both in scope and depth, to include additional products and smaller manufacturers. Watch the regular issues of the RECORD for supplementary data.

22—TEXTILE MILL PRODUCTS

A survey covering the industrial textile industries will appear in the November 1957 issue of MANUFACTURERS RECORD. This will include manufacturers of work clothes, uniforms, special application clothing; rope, cable, twine, cordage; webbing; insulating felts; rubberized fabrics; upholstery fillings; gasket materials; waste, wiping cloths.

23—APPAREL & OTHER FINISHED TEXTILE PRODUCTS

Certain of these industries will appear in the November 1957 issue of MANUFACTURERS RECORD (see note under S.I.C. 22) and others in the October 1957 issue of MANUFACTURERS RECORD (see note under S.I.C. 25).

24—LUMBER & WOOD PRODUCTS

A survey covering the lumber and wood industries will appear in a later issue of MANUFACTURERS RECORD.

25—FURNITURE & FIXTURES

A survey covering office furniture and equipment manufacturers will appear in the

October 1957 issue of MANUFACTURERS RECORD. This will include not only office furniture, but also office machines, interior decoration, rugs, draperies & supplies.

One Source For Your Laboratory Needs . . .

W. H. Curtin & Company provides one dependable source for all of your laboratory requirements. Four warehouses and three sales offices strategically located in cities of the South and Southwest are staffed with experienced technical personnel and equipped with the most modern facilities to handle your requirements. Curtin Technical Representatives are ready to help you with your laboratory problems and assist in the selection and service of your equipment. Save time and money by ordering everything from Curtin — where complete stocks and facilities assure you of the best of service.

Products of LINDE COMPANY

Division of Union Carbide Corporation

INDUSTRIAL GASES

LINDE Oxygen, Nitrogen, Argon, Neon,
Helium, Krypton, Xenon, Hydrogen
PREST-O-LITE Acetylene

CALCIUM CARBIDE

UNION Carbide
CARBIC Processed Carbide

OXY-ACETYLENE EQUIPMENT

OXWELD Apparatus for Cutting, Joining,
Treating, and Forming Metals, Acetylene
Generators, Manifolds, Regulators and
Valves, Welding Rods and Supplies
PUROX Welding and Cutting Apparatus
PREST-O-LITE Air-Acetylene Apparatus and
Small Tanks
CARBIC Acetylene Flood Lights
Acetylene Generators

ELECTRIC WELDING AND CUTTING EQUIPMENT

UNIONMELT Automatic Welding Apparatus and Supplies
HELIARC Welding and Cutting Torches
LINDE Sigma Welding Equipment
UNIONARC Welding Equipment and Supplies

SPECIAL EQUIPMENT

LINDE Jet-Piercing Equipment
Plate-Edge Preparation Equipment
Steel-Conditioning Machines
Sub-Zero Cold Treatment Equipment
OXWELD Oxy-Acetylene Cutting Machines
Pressure-Welding Machines
PREST-O-LITE Cylinders, Shapes and Shells

OXYGEN THERAPY SUPPLIES

LINDE Oxygen U.S.P.
Oxygen Regulators
OXWELD Oxygen Manifolds and Valves

SYNTHETIC CRYSTALS

LINDE Synthetic Sapphire, Ruby, Spinel, and
Titania. Fine Alumina Abrasive

The terms "Carbic," "Heliarc," "Linde," "Oxweld," "Prest-O-Lite," "Purox," "Union,"
"Unionarc," and "Unionmelt" are trade-marks of Union Carbide Corporation.

NEW AERIAL PHOTO shows Atlantic Steel Company's new rod and bar mill, one of the world's fastest steel rolling mills. In the background is part of the company's 200-acre plant on Atlanta's north side.

DIXISTEEL

a growing name in Dixie

DURING the past 10 years great things have happened to make the name DIXISTEEL mean more than ever to Southern industry.

Here are some of the major developments which made up the \$16-million modernization and improvement program designed to increase the output and range of DIXISTEEL products:

- One of the world's fastest combination rod and bar mills
- Two giant 75-ton electric furnaces—largest in the Southeast
- A complete Warehouse Division to stock high-carbon and stainless steels, a full line

of aluminum products, and many copper items, in addition to Dixisteel products

- Modernization of the nail and wire mills
- New and enlarged hot-dip galvanizing facilities
- Fabrication of concrete reinforcing bars for the constantly growing construction industry

In addition, there are now complete lines of DIXISTEEL Rigid-Frame Buildings and Chain Link Fence.

As a result of all this, increasing needs of industry in Dixie will be better served by Atlantic Steel—one of the nation's completely independent steel producers.

This 32-Page Catalog Points the Way to Improved Design of Many Modern Products

Diamond Perforated Metal is an important factor in the design and construction of more products that enter into every-day life than most people realize.

In Space Heaters, for example, in Air Conditioners, Television Sets, Diffused Lighting Fixtures, the Ornamental Enclosures which conceal your radiators, the Spinner Basket of your washing machine, the Screens which help prepare the coal you burn and the food you eat.

Industrial applications cover an even wider range—from Machinery Guards and Sound Control Equipment to Stainless Steel Screens for oil refineries and synthetic rubber plants. New applications are developing every day as we keep in step with the requirements of engineers, chemists and industrial designers.

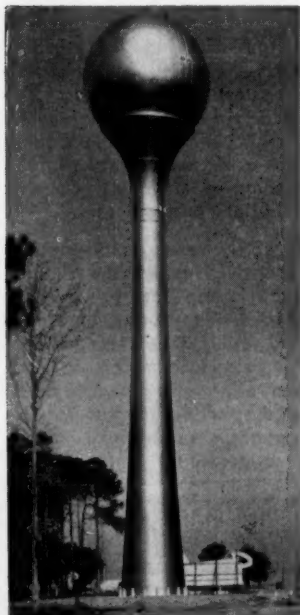

Catalog 39 shows many modern applications; gives all the illustrations and working data you need to plan ahead. Write, today, for a free copy and tell us about ANY requirement for perforated metal. We are equipped to fabricate complete parts, if desired, and our engineers welcome opportunities to make money-saving suggestions.

**Model "EE" Testing Machine for Creep Rupture and Hot Tensile Testing.
Capacities 12,000# as a Creep Tester and 20,000# as a Hot Tensile Tester.**

This model features the new fully enclosed cabinet housing all weights, elevator and lever arm. Equipped with automatic cutoff device to shut off power to furnace, timer, recorders, controllers and auxiliary apparatus in the event of specimen failure.

Automatic electronic controller working in conjunction with motorized power ram allows specimen to elongate five inches without shock, bending, torsional or cyclic effects and without varying load or axiality.

The Model E-E is equipped with a new type of hydraulic load measuring device that is different from anything ever offered in a testing machine. It consists of a fully isolated shock proof captive circuit having no packing glands, pumps or other troublesome weakness.

It can be supplied as shown with channel recorder, which will print permanent record of load applied, creep or elongation and one or more temperature records.

An Announcement of Particular Interest to Manufacturers and Sales Promotion Organizations

A new corporation utilizing the resources and talents of two well-known companies has been organized to offer specialized motion picture production services to business firms and organizations throughout the nation.

The new concern, INDUSTRIAL SOUND FILMS, INC., is jointly owned by George M. Kirkland and H. McKinley Conway, Jr. Mr. Kirkland is widely known in the film industry as President of International Sound Films, while Mr. Conway has gained national recognition as publisher of INDUSTRIAL DEVELOPMENT and MANUFACTURERS RECORD.

Under the imaginative leadership of these two dynamic young executives, INDUSTRIAL SOUND FILMS, INC. is equipped to produce a variety of full color motion pictures for use in public relations, sales promotion, personnel training, and operations analysis. From editorial planning through all phases of production, the new firm offers professional service geared to meet the specific needs of the industrial film user.

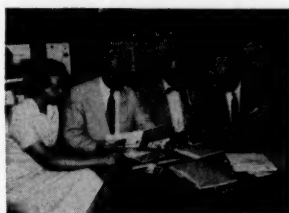

INDUSTRIAL SOUND FILMS, INCORPORATED

CONWAY BUILDING

NORTH ATLANTA 19, GEORGIA

Setting up production board for a new film are George Kirkland, production head, and Gil Hainsobn director and cinematographer. Production of an outstanding industrial film requires close coordination of research, script writing, shooting schedules, sound, editing, and processing.

Conferring on specialized editorial content are Conway Publications staffers, including Beth Friedman, chief researcher; McKinley Conway, editor; Jonett Davenport, managing editor; and Bill Pruett, art director. A wide range of technical and industrial experience can be brought to bear on any film project.

Completely-equipped recording studios as well as a large sound library are part of the modern facilities provided by INDUSTRIAL SOUND FILMS. Among production technicians are Hollywood-trained cameramen and narrators with radio broadcasting background.

INDUSTRIAL SOUND FILMS offers fully-equipped mobile units which film "on location" anywhere in the nation. Work may be done outdoors as in this case or indoors, utilizing large sound stages where weather and light can be controlled. Examples of color films made by the organization are available for showing to prospective clients.

your inquiry is invited; no obligation, of course
